

Membership Health Testing Services: Comprehensive Comparison Report

An independent, reproducible comparison by **clayphi**.

Scope: All US membership health-testing services with 50+ biomarkers, on a recurring-membership model **Reference panel:** A 45-test, male-inclusive longevity panel (see S4 §4.1 for the declared category weights and scoring assumptions) **Reproducibility:** Every 1-10 category score and weighted total is produced by a transparent scoring rubric; the weights can be changed and the ranking re-run.

S0. Executive Summary

Hundred Health (\$199/yr) is the best all-around membership blood-testing service for comprehensive longevity monitoring (7.60/10). It wins the Value category outright (lowest cost per biomarker, ~\$2.80, at the lowest price, \$199), pairs that with confirmed Garmin sync plus automated full medical-record import (450+ EHR systems) and field-best logistics, and tops the weighted ranking.

Function Health (\$365/yr) is the best choice where comprehensive clinical breadth is the goal (7.20/10): the broadest directly-measured panel (~92 markers incl. NMR/ANA/heavy metals) with two draws a year.

Fifteen services were scored on a transparent 7-category weighted rubric (Value 30%, Total Coverage 20%, Priority Coverage 15% the largest weights); every score comes from a published engine that anyone can re-weight and re-run. No single service covers the full 45-test reference panel, so completing it takes some à-la-carte gap-fill regardless of choice.

Ranked at a Glance

#	Service	\$/yr	Score
1	Hundred Health	\$199	7.60
2	Function Health	\$365	7.20
3	Superpower Base+Adv	\$388	6.80
4	Mito Health Pro	\$549	6.60
5	Mito Health Core	\$349	6.35
6	Superpower Base Only	\$199	6.30
7	SiPhox Health U360	\$450	5.35
8	WHOOP Advanced Labs	\$588	5.20
9	Empirical Health	\$399	5.15
10	InsideTracker	\$829	5.05
11	Lifeforce	\$599	4.75
12	Ultrahuman Blood Vision †	\$499	4.65
13	Parsley Longevity Labs †	\$350	4.08
14	Wild Health	\$4,345	3.90
15	Geviti Plus †	\$1,529	3.58

† Biomarker list not published, Priority Coverage, Total Coverage, and the Value cost-efficiency leg are confidence-discounted $\times 0.5$ (\$4.6). The full table with verdicts, per-marker cost, and coverage is in S2; per-category scoring is in S7.

Category Awards

The headline picks by use case. Every winner is drawn from the same weighted scoring, the full ranked table is in S2, per-category detail is in S7, and the rationale for each pick is in S8.

Category	Winner	Why it wins
Best Overall	Hundred Health (\$199/yr)	Tops the weighted ranking (7.60): wins the Value category outright, plus confirmed Garmin sync, 450+ automated EHR import, and field-best logistics, if the leaner \$199 core panel is acceptable
Best for Comprehensive Breadth	Function Health (\$365/yr)	The broadest directly-measured panel (~92 markers incl. NMR/ANA/heavy metals) plus 2 draws/yr, weighted 7.20, the top pick when panel completeness is the priority
Best Value	Hundred Health (\$199/yr)	The field's top Value score (10): the lowest cost per biomarker (\$2.80) at the lowest price (\$199)
Lowest Price	Hundred Health · Superpower Base (\$199/yr)	The two cheapest comprehensive memberships evaluated
Most Complete Panel	Mito Health Pro (\$549/yr)	Highest coverage of the 45-test reference panel (36/45, 80%); uniquely includes Cystatin C + IGF-1
Best for Wearable Users	Hundred Health (\$199/yr)	Confirmed Garmin sync + 450+ automated EHR import, at the lowest price of any confirmed-Garmin service

Category	Winner	Why it wins
Best Data Integration	InsideTracker (\$829/yr)	Garmin sync + native CSV export + 30 record uploads/yr
Best for Frequent Monitoring	Empirical Health (\$399/yr)	The most draws per dollar, 3 draws/yr at ~\$133/draw

Bottom Line

Hundred Health (\$199/yr) is the top all-around pick (weighted 7.60). It wins the Value category outright (lowest cost per biomarker, ~\$2.80, at the lowest price, \$199), adds confirmed Garmin sync plus 450+ automated EHR import and a 100-day protocol, and posts field-best logistics. Trade-off: its reduced \$199 panel covers 21/45 (47%) of the priority markers vs Function Health's 32/45 (71%), and the service is only ~6 months old.

If comprehensive clinical breadth is the priority: Function Health (\$365/yr, weighted 7.20) has the broadest directly-measured panel (~92 markers incl. NMR/ANA/heavy metals) with 2 draws/yr. No single service covers all 45 target tests, so completing the panel takes roughly \$326-345/yr of à-la-carte gap-fill (e.g., via a DTC lab such as Marek Health), reaching 42/45 direct coverage (93%) for a combined ~\$691-710/yr. **For maximum 45-panel hit rate,** Mito Health Pro (\$549/yr) leads at 36/45 (80%), but with only 1 draw/yr and no wearable sync or data export.

If raw-data export also matters: InsideTracker (\$829/yr) pairs Garmin with native CSV export and cross-platform trending.

Completing the panel: no membership service covers all 45 targets, common gaps (Fibrinogen, LP-PLA2, Oxidized LDL, C-Peptide, Copper, Ceruloplasmin) require à-la-carte DTC ordering regardless of the service chosen. Service and lab availability vary by state; confirm both before purchasing.

Adjust the weights yourself

These category weights are **editorial choices**, not universal truths, so try your own. The interactive **Weight Explorer** below loads with this report's default weighting applied; drag any of the seven category sliders (they always total 100%, and you can  lock the ones you care about) and all 15 services re-rank live.

► **Open the Weight Explorer full-screen**, same tool, its own page. *(Interactive on the web version; in print/PDF, use the link.)*

S1. Problem Statement

What We Are Solving

Which membership-based health-testing service(s) deliver the best foundation for ongoing comprehensive blood-based health monitoring. The decision is not solely about biomarker count -- it encompasses the total value proposition: biomarker coverage of a defined 45-test reference panel, data access and exportability, interpretation quality, wearable integration (Garmin, Oura, WHOOP, Apple Health), convenience, cost-effectiveness, and provider trustworthiness.

Why It Matters

Data-driven health monitoring is foundational to a longevity-oriented lifestyle. Membership health testing services offer recurring comprehensive blood panels at a fraction of a-la-carte pricing, enabling longitudinal trend tracking that single-draw services cannot. For an active individual optimizing for healthspan, identifying subclinical trends early -- metabolic drift, hormonal shifts, nutrient depletion, cardiovascular risk markers -- requires consistent, broad-panel testing with raw data access for personal analysis.

Scoring Assumptions

Every service is scored against one declared reference profile so the rankings are reproducible and the weighting is transparent. These are editorial choices, not universal truths — a reader who weights the categories differently, or who needs a different panel, can re-run the scoring and get a different order.

Assumption	Value	Why it matters
Reference panel	A comprehensive longevity panel of 45 target tests, male-inclusive	Drives Priority & Total Coverage. A female variant would swap the sex-hormone markers (Total/Free Testosterone, etc.); the rest of the panel is sex-neutral.
Goals	Longevity / healthspan: broad baseline + longitudinal trend tracking	Favors recurring multi-draw services with broad panels
Data needs	Raw numerical results, CSV/export, wearable integration	Rewards data portability and wearable sync (Garmin, Oura, WHOOP, Apple Health)
Availability	United States (50 states)	Services not available in the US are disqualified (DQ-3)

What This Report Covers

This report provides complete service profiles, standardized biomarker counting, an objective weighted scoring rubric, and a broad search across membership services that offer comprehensive recurring blood panels (50+ biomarkers). Four services were examined in depth (Function Health, Hundred Health, Superpower, Mito Health) alongside ten additional discovered services.

The 5 Outputs

Output	Description
1. Complete Service Profiles	For every confirmed and discovered service: pricing, complete biomarker inventory, features, lab logistics, trust/track record
2. Objective Scoring Methodology	Transparent, weighted 7-category scoring system (Priority Coverage 15%, Total Coverage 20%, Value 30%, Frequency 10%, Unique Features 10%, Data Access 10%, Convenience 5%) with 1-10 rubrics
3. Coverage Matrix	Every unique biomarker across all services (rows) x each service (columns), with  /  / CALC / ADD notation
4. Feature Comparison Matrix	Every non-biomarker feature (rows) x each service (columns)
5. Final Recommendation	Best overall, best value, best data integration, best for monitoring, services to avoid, recommended combination

The 45-Test Target Panel

The 45-test panel is the defined coverage target used by this report for the Priority and Total Coverage categories; it reflects a comprehensive longevity-oriented panel but is a specific target, not a universal standard.

#	Category	Test
1	Basic Metabolic	CBC (full with differential)
2	Basic Metabolic	CMP (full panel)
3	Basic Metabolic	Lipid Panel (TC, LDL, HDL, TG)
4	Basic Metabolic	HbA1c
5	Basic Metabolic	Fasting Insulin
6	Basic Metabolic	Fasting C-Peptide
7	Basic Metabolic	GGT
8	Basic Metabolic	Uric Acid
9	Thyroid	TSH
10	Thyroid	Free T3
11	Thyroid	Free T4
12	Thyroid	TPO Antibodies
13	Thyroid	Thyroglobulin Antibodies (TgAb)
14	Sex Hormones	Total Testosterone
15	Sex Hormones	Free Testosterone
16	Sex Hormones	Estradiol (E2)
17	Sex Hormones	SHBG
18	Sex Hormones	DHEA-S
19	Sex Hormones	LH
20	Sex Hormones	FSH
21	Sex Hormones	Prolactin
22	Vitamins & Minerals	Vitamin D (25-OH)
23	Vitamins & Minerals	B12
24	Vitamins & Minerals	Folate
25	Vitamins & Minerals	Ferritin
26	Vitamins & Minerals	Iron Panel (Iron, TIBC, % Saturation)
27	Vitamins & Minerals	RBC Magnesium
28	Vitamins & Minerals	Zinc
29	Vitamins & Minerals	Selenium
30	Vitamins & Minerals	Copper
31	Vitamins & Minerals	Ceruloplasmin
32	Inflammation	hs-CRP
33	Inflammation	Homocysteine
34	Inflammation	ESR
35	Inflammation	Fibrinogen
36	Cardiovascular Advanced	ApoB
37	Cardiovascular Advanced	Lp(a)

#	Category	Test
38	Cardiovascular Advanced	LDL-P / NMR LipoProfile
39	Cardiovascular Advanced	LP-PLA2
40	Cardiovascular Advanced	Oxidized LDL
41	Cardiovascular Advanced	Omega-3 Index
42	Other	IGF-1
43	Other	Cystatin C
44	Other	Cortisol
45	Other	PSA (Total + Free)

S2. Final Rankings

Headline picks and the at-a-glance scoreboard are in the [Executive Summary](#). This section is the full detail: every qualifying service with per-marker cost, coverage, and a one-line verdict, plus the services excluded from scoring.

Ranked Table -- All Qualifying Services

Rank	Service	\$/yr	Draws/yr	45-Panel	Measured	\$/Marker	Score	Confidence	Verdict
1	Hundred Health	\$199	2	21/45 (47%)	~71	\$2.80	7.60	MEDIUM	Best all-around: wins Value outright (lowest cost per biomarker, \$2.80, at the lowest price, \$199), confirmed Garmin, 450+ EHR import, 100-day protocol, 2 draws/yr; leaner core panel; ~6 months old
2	Function Health	\$365	2	32/45 (71%)	~92	\$3.97	7.20	HIGH	Best for breadth: highest directly-measured count, NMR/ANA/metals, 2 draws/yr, strong app; missing Garmin and CSV natively
3	Superpower Base+Adv	\$388	1	33-34/45 (73-76%)	~87	\$4.46	6.80	MEDIUM	Competitive coverage at low price, Garmin sync (Mar 2026); but service launched Aug 2025 (new), active lawsuit, aggressive supplement upsell, 1 draw/yr
4	Mito Health Pro	\$549	1	36/45 (80%)	~87-95	~\$6.03	6.60	HIGH	Best panel completeness: highest 45-panel hit rate, Cystatin C + IGF-1 unique; only 1 draw/yr, no app, no wearable, no data export, \$549 price weighs on affordability
5	Mito Health Core	\$349	1	30/45 (67%)	~75-80	~\$4.50	6.35	HIGH	Solid entry-level: B12, Folate, RBC Mg, ESR in base; 1 draw/yr, no NMR, no Garmin. Strong cost per biomarker (~\$4.50) and low \$349 price give it a high blended Value

Rank	Service	\$/yr	Draws/yr	45-Panel	Measured	\$/Marker	Score	Confidence	Verdict
6	Superpower Base Only	\$199	1	17/45 (38%)	~55	\$3.62	6.30	MEDIUM	Cheapest comprehensive entry: \$199 + strong cost-per-biomarker drive a high blended Value; but only 17/45 priority, service launched Aug 2025 (new), insufficient as a sole comprehensive panel
7	SiPhox Health U360	\$450	2	24/45 (53%)	~45	\$10.00	5.35	MEDIUM	Maximum convenience (at-home); documented accuracy problems, no CBC, borderline count
8	WHOOP Advanced Labs	\$588	2	~24/45 est.	~50-55	\$10.69	5.20	MEDIUM	Best wearable-blood correlation (HRV/sleep/strain); requires WHOOP membership, no Garmin, no at-home, limited thyroid
9	Empirical Health	\$399	3	~25-30/45 est.	~45-50	\$8.31	5.15	LOW	Best draw frequency at low cost; no hormones, heart-health only
10	InsideTracker	\$829	2	~22/45 (49%)	~43-48	\$17.27	5.05	MEDIUM	Best data integration: confirmed Garmin, CSV, 30 uploads/yr; expensive for count, limited panel
11	Lifeforce	\$599	2	~18-22/45 (40-49%)	~48	\$12.48	4.75	MEDIUM	Prescribing (TRT) + clinician; limited 45-panel coverage (no specialty markers), supplement upsell
12	Ultrahuman Blood Vision †	\$499	2	~25-35/45 est.	~80-100+	\$5.54	4.65	LOW	Broad categories + CSV export + wearable-blood correlation; unpublished biomarker list unverifiable — Priority/Total/Value-efficiency confidence-discounted ×0.5 (\$4.6)
13	Parsley Longevity Labs †	\$350	1	~20-24/45 est.	~72-76	\$4.86	4.08	LOW	Unpublished list, male panel uncertain, no app, BBB D- — Priority/Total/Value-efficiency confidence-discounted ×0.5 (\$4.6)
14	Wild Health	\$4,345	4	~14-15/45 (31-42%)	~58	\$74.90	3.90	MEDIUM	Genetics + epigenetic age + quarterly physician; \$74.90/ biomarker, billing fraud, worst 45-panel coverage
15	Geviti Plus †	\$1,529	2	~30-35/45 est.	~70-80	\$21.84	3.58	LOW	Prescribing (TRT, GLP-1s) + physician visits; expensive, unpublished list, Rx upsell — Priority/Total/Value-efficiency confidence-discounted ×0.5 (\$4.6)

† Unpublished biomarker list — Priority Coverage, Total Coverage, and the Value cost-efficiency leg confidence-discounted ×0.5 per \$4.6; the Score shown is the confidence-adjusted weighted total used for ranking (raw category scores shown in S7.1 for transparency).

Disqualified Services (Not Scored)

Service	Reason
Forward (goforward.com)	Shut down Nov 2024
Fountain Life	Blood panel bundled at \$10,500+ minimum; no standalone option
OneTwenty	Closed beta, ~25 members
Oura Health Panels	~35-40 directly measured (<50 threshold)
Elo Health	Only 12 biomarkers
Jinfiniti AgingSOS	Max 47 biomarkers; not membership model
Marek Health	A-la-carte only; recommended for gap-fill. Geographic availability varies by state -- confirm before ordering.
Prenuvo	Blood testing bundled with MRI; <50 blood markers
TSquared Health	Singapore only
Tally Health	Not blood testing (cheek swab)
Nucleus Genomics	Not blood testing (DNA only)

S3. Service Profiles

Standardized Biomarker Counting Methodology

All biomarker counts use the canonical method: **"Directly measured unique analytes, base tier, single draw."**

Uniform granularity (corrected 2026-06-10): panel components are counted at the parameter level for **every** service — CBC and CMP components individually, and every published urinalysis parameter individually, with subtype groups (crystal, cast, and epithelial-cell types) collapsed to one finding each so no service is padded (Function Health ~16 urine findings, Superpower ~15, Mito ~19, Hundred Health ~19 after collapsing its 27 listed params). No service's panel is collapsed while another's is itemized. This corrected an earlier inconsistency in which Hundred Health's urinalysis was counted as a single panel (yielding ~53 measured) while competitors' urinalyses were itemized; counted the same way as the others, Hundred Health's comparable total is ****~71**** (52 non-urine + ~19 urine).

Inflation Pattern	Services Affected	Details
Counting calculated ratios as biomarkers	Superpower (~40 ratios inflate "100+" claim); Mito Health (~17-20 calculated); Function Health (~21 calculated); Hundred Health (~15 calculated)	
Counting across multiple draws as total	Function Health ("160+ lab tests" counts same marker on both draws); Hundred Health (live site now markets "100+ lab tests" ; the homepage hero "160+" is a stale, un-updated \$499-era asset -- the "160+" = Draw 1 ~110 + Draw 2 ~55 summed, same markers counted twice)	
Counting CBC/CMP sub-components individually	All services -- standard practice but inflates apparent counts	
Marketing number vs directly measured reality	Superpower: "100+" marketed, ~55 directly measured; Mito Health: "100+" marketed, ~67-72 directly measured Core; Function Health: "160+" marketed, ~92 directly measured per draw; Hundred Health: now markets "100+" (was "160+"), **~71 directly measured (granular)** on its reduced \$199 panel	

S3a. Confirmed Service Profiles

S3a-1. Function Health (\$365/year) | functionhealth.com

Pricing

Item	Detail
Price/year	\$365 (reduced from \$499 in Nov 2025)
Draws/year	2 included (Annual: 100+ tests; Mid-Year: 60+ tests)
Cost per draw	\$182.50
Tiers	Single tier -- all members get identical access
At-home draw	Not available (Quest PSC only)
HSA/FSA	Yes
Add-on costs	Extended panels at member pricing (Galleri \$899, Lyme \$549, Extended Vitamins/Minerals price unknown)
Cancellation	48-hour refund window; no refunds after; no pause option

Biomarker Count: ~92 directly measured per draw | ~21 calculated/derived | ~110-120 unique across both draws | "160+" marketed

45-Panel Coverage: 32/45 direct (71%) + 2 indirect = 76% effective

Status	Count	Details
Directly measured (base)	32	CBC, CMP, Lipid Panel, HbA1c, Fasting Insulin, GGT, Uric Acid, TSH, Free T3, Free T4, TPO Ab, TgAb, Total T, Free T, Estradiol, SHBG, DHEA-S, LH, FSH, Prolactin, Vitamin D, Ferritin, Iron Panel, RBC Magnesium, Zinc, hs-CRP, Homocysteine, ApoB, Lp(a), LDL-P/NMR, Cortisol, PSA Total+Free
Indirect/proxy	2	B12 (via MMA); Omega-3 (serum total, not RBC Index)
Available as add-on	2	Folate, Selenium (Extended Vitamins/Minerals add-on)
Missing entirely	9	C-Peptide, Copper, Ceruloplasmin, ESR, Fibrinogen, LP-PLA2, Oxidized LDL, Cystatin C, + 1

Key Features

Feature	Status	Detail
Dashboard/App	iOS 4.9/5 (18.5K ratings), Android 3.7/5, Web	Clean, color-coded, universally praised UI
Garmin integration	No	Apple Health only; requires iOS workaround
NMR LipoProfile	Full (included)	LDL-P, LDL Small/Medium, HDL Large, LDL Peak Size
Autoimmunity panel	ANA + RF (included)	Annual draw only
Heavy metals	Lead + Mercury (included)	Annual draw only
Data export	PDF only natively	Third-party Chrome extension for CSV/JSON; no API
Clinician review	Written notes only	Widely reported as generic/AI-generated
Biological age	Yes, 2x/year	Proprietary from ~130 blood biomarkers; NOT methylation

Notable Strengths: Best biomarker breadth for the price (~92/draw at \$365/yr, 2 draws). Full NMR + ApoB + Lp(a) + both thyroid antibodies + RBC Magnesium + Omega-3/6 panel (7 fatty acids) in base. iOS 4.9/5 (18,496 ratings). 100K+ members, \$354M raised, Trustpilot 4.3/5 (997 reviews).

Notable Weaknesses: No native Garmin. No CSV export natively. No live physician interaction. 9/45 target tests missing. B12 only via MMA proxy. Slow results (3-4 weeks full, 4-6 weeks clinician notes). Difficult cancellation reported.

Trust Considerations: Multiple outlets have drawn comparisons to Theranos (VC-backed mass blood testing narrative). Co-founder Mark Hyman, MD has a history of promoting pseudoscience and unproven detox diets, which some critics cite as a credibility concern. However, Function Health uses standard Quest Diagnostics CLIA-certified labs for all testing (unlike Theranos's proprietary, unvalidated technology), and the Theranos analogy is considered superficial by most industry observers. The criticism is worth noting but should be weighed against the company's transparent use of established lab infrastructure.

S3a-2. Hundred Health (\$199/year) | hundred.com

Note: When Hundred Health cut its price to \$199/yr, it also reduced its blood panel — the current itemized panel on hundred.com/what-we-test drops a set of specialty markers carried on the prior \$499 panel (see biomarker count below).

Price dropped from \$499/yr → **\$199/yr** (\$0.55/day), a ~\$300 (~60%) cut; the \$499 (\$1.37/day) figure now appears only as a legacy anchor/comparison ("was \$499"). Single tier verified via /join.

Pricing

Item	Detail
Price/year	\$199 (\$0.55/day; "\$16/month, billed annually"). \$499 = legacy anchor only.
Draws/year	2 included -- Draw 1 ~110 markers / Draw 2 ~55-marker reduced progress panel at ~100 days (corroborated, not in plain-text on current site)
Cost per draw	~\$99.50 (= \$199 ÷ 2 draws)
Tiers	Single tier -- everything included (\$499 = legacy anchor)
At-home draw	Yes, mobile/at-home phlebotomy at additional cost -- fee unconfirmed (exists, amount unpublished; industry \$75-\$150/visit)
HSA/FSA	Yes
Add-ons	DUTCH Complete \$300 , DNA Methylation (TruMe) \$180 , Galleri "Coming Q1 2026" (no published price; Prenuvo/CGM/gut/coronary calcium also pre-launch)

Biomarker Count: ~71 directly measured under the uniform granular convention (52 non-urine analytes + ~19 urinalysis findings (27 listed params, subtypes collapsed); the earlier urinalysis-collapsed figure of ~53 is retired) | ~15 calculated | homepage now markets "100+" (was "160+", double-draw counting).

45-Panel Coverage (reduced \$199 panel): 21/45 direct (47%)

Status	Count	Details
Directly measured (base)	21	CBC, CMP, Lipid panel, HbA1c, Fasting Insulin, GGT, TSH, Free T4, Total T, Free T, Estradiol, SHBG, LH, FSH, Vit D, Ferritin, Iron Panel, hs-CRP, ApoB, PSA (<i>collapsed slots, baseline-comparable</i>)
Missing entirely	24	16 long-standing gaps: C-Peptide, TPO Ab, TgAb, DHEA-S, B12, Folate, RBC Mg, Selenium, Copper, Ceruloplasmin, Cystatin C, Fibrinogen, LP-PLA2, ESR, Oxidized LDL, Omega-3 Index. + 8 dropped from the prior \$499 panel: Free T3, serum Uric Acid, Lp(a), LDL-P/NMR, IGF-1, Cortisol, Prolactin, Homocysteine

Current 45-panel direct coverage = 21 / 45 = 46.7% ($\approx$ 47%), down from the prior \$499-panel 29/45 (64%); net –8 slots under like-for-like collapsed framing. **Bridge (auditability): 29 baseline-covered – 8 dropped + 0 added = 21 covered; identity 21 covered + 8 dropped + 16 never-present = 45 ✓** (the 8 dropped: Free T3, serum Uric Acid, Lp(a), LDL-P/NMR, IGF-1, Cortisol, Prolactin, Homocysteine).

Key Features

Feature	Status	Detail
Dashboard/App	iOS 4.9/5 (68 ratings) , v1.39.0, Web	Up from 4.8/5 (20); ratings >3×
Garmin integration	Yes (confirmed)	Listed on live homepage; middleware-mediated (specific Garmin metrics synced TBD)
Medical record import	Yes -- 450+ EHR systems	Up from 300+; unique; one reviewer reported 21 years auto-imported. Epic/Cerner not named.
100-day clinician protocol	Yes	Personalized nutrition, exercise, supplements, recovery; clinician-reviewed
NMR LipoProfile	Now absent	Not on the current itemized panel.
Data export	PDF-only (no CSV/API)	Lab-result PDFs viewable/shareable in-app; no CSV, no public API found

Notable Strengths: Price dropped to **\$199/yr** (~60% cut). Confirmed Garmin sync. Only service with **450+ EHR medical record import** (unique). 100-day structured clinician protocol. **2 draws/year included.** iOS 4.9/5 (68 ratings). Thorne/Momentous supplements (no proprietary upsell). 5,000+ draw locations.

Notable Weaknesses: ~6 months old as of **2026-06** (launched Dec 16, 2025) -- maturity risk. **Reduced panel:** homepage marketing dropped "160+" → "100+", and the itemized panel fell from ~104-117 → ~71 measured (granular) and 45-panel coverage from 29/45 → 21/45, with specialty markers (NMR, Lp(a), IGF-1, Cortisol, Prolactin, Free T3, ANA, Lead, Amylase/Lipase, Homocysteine, Zinc, serum Uric Acid, Free PSA, among others) dropped from the itemized panel. **No CSV export** (PDF-only). Critical nutrient gaps persist (no B12, Folate, RBC Mg, Selenium, Copper, Ceruloplasmin). No thyroid antibodies. No DHEA-S. No Cystatin C. Draw 2 is reduced scope (~55 markers).

Trust note: Hundred Health is ~6 months old (launched Dec 2025), which is the main trust consideration. Counterpoint: founder/CEO Tyler Smith previously founded and bootstrapped SkySlope, the real-estate transaction platform acquired (majority stake) by Fidelity National Financial (NYSE: FNF) in 2017 at an \$80M+ valuation, and is an early investor in Function Health and TruMe — an established execution track record for a first-year company. Hundred's launch was covered by Forbes (Dec 2025).

Note on biomarker count (count reconciliation): The prior \$499 panel scored HH at **29/45 (64%)** directly measured (~104-117 total). The current hundred.com/what-we-test page itemizes a reduced ****~100+**** panel: under the like-for-like collapsed framing this yields **21/45 (47%)** direct (~71 total measured under the uniform granular convention). The 8 dropped 45-panel slots are Free T3, serum Uric Acid, Lp(a), LDL-P/NMR, IGF-1, Cortisol, Prolactin, Homocysteine; none of the 16 prior-missing markers were added.

S3a-3. Superpower (\$199-\$388/year) | superpower.com

Pricing

Item	Detail
Price/year	\$199 (Baseline); \$388 (Baseline + Advanced Panel)
Draws/year	1 included
Cost per draw	\$199 (Baseline) or \$388 (with Advanced)
Tiers	Single membership + add-on panels (Advanced \$189, Cardiovascular \$159, Metabolic \$129, Autoimmunity \$139, Heavy Metals \$129, and more)
At-home draw	+\$99-119 per draw
HSA/FSA	Yes
Cancellation	No refunds; no cancel button in dashboard; FTC Click-to-Cancel concerns

Biomarker Count: ~55 directly measured (Baseline) | ~87 with Advanced | ~40 calculated ratios inflate "100+" claim

Critical inflation note: Superpower's "100+" marketing is the most aggressively inflated. ~40 calculated ratios counted as separate biomarkers. Function Health filed a federal lawsuit (Jan 2026, Case 2:26-cv-00810) alleging false advertising.

45-Panel Coverage: 17/45 Baseline (38%) | 33-34/45 with Advanced (73-76%)

Status	Count	Details
Directly measured (Baseline \$199)	17	CBC, CMP, Lipid, HbA1c, GGT, Uric Acid, TSH (old methodology), Total T, Estradiol, SHBG, DHEA-S, Vit D, Ferritin, Iron Panel, hs-CRP, ApoB, Cortisol. Count corrected from 20: TSH uses old methodology (not Free T3/ T4), Free T calculated not measured, and Fasting Insulin not in baseline.
Added with Advanced (\$388)	+13	Fasting Insulin, Free T3, TPO Ab, TgAb, LH, FSH, Prolactin, B12, Folate, Homocysteine, ESR, Lp(a), IGF-1, PSA, LDL-P
Missing from ALL panels	11	C-Peptide, RBC Mg, Zinc, Selenium, Copper, Ceruloplasmin, Fibrinogen, LP-PLA2, Oxidized LDL, Omega-3, Cystatin C

Key Features

Feature	Status	Detail
Dashboard/App	iOS 4.9/5 (173 ratings), Web	"Most beautiful health platform" but "very light" analysis
Garmin integration	Yes (v1.0.6, March 2026)	Quality/depth unverified post-update
Data export	"Download or delete your data"	Format unspecified
Physician access	SMS concierge only	Health coaches, NOT physicians
Supplement marketplace	Aggressive upsell	AI recommends \$400+/month from own marketplace

Notable Strengths: Lowest entry price (\$199/yr). Garmin added March 2026. With Advanced (\$388), competitive coverage (33-34/45). Adds B12, Folate, ESR that Function lacks. Quest + Labcorp lab access.

Notable Weaknesses: Most misleading biomarker marketing. Aggressive supplement upselling. Baseline alone insufficient (17/45). Misleading "24/7 clinical team." Doctored Reddit ad. Cancellation difficulties. Older thyroid methodology at baseline.

S3a-4. Mito Health (\$349-\$549/year) | mitohealth.com

Pricing

Item	Detail
Price/year	Core: \$349; Pro: \$549; Ultra: \$1,699; Duo: \$680 (2 Core)
Draws/year	1 included (all tiers)
Cost per draw	\$349 (Core) or \$549 (Pro)
Tiers	Core (blood + urine), Pro (Core + Heavy Metals, Omega-3/6, Cholesterol Particles, IGF-1, Cystatin C), Ultra (Pro + Galleri + Gut Microbiome)
At-home draw	Not available (in-lab only)
HSA/FSA	Yes
Add-on costs	Heavy Metals \$99, IGF-1 \$79, Cholesterol Particles \$89, Omega-3/6 \$99, Autoimmune Screen \$69, DEXA \$59

Biomarker Count: Core ~75-80 directly measured (incl. the 21-parameter urinalysis) | Pro ~87-95 | ~17-20 calculated | "100+" marketed

45-Panel Coverage: Core 30/45 (67%) | Pro 36/45 (80-82%) -- highest of any service

Status	Count	Details
Directly measured (Core \$349)	30	CBC, CMP, Lipid, HbA1c, Fasting Insulin, GGT, Uric Acid, TSH, Free T3, Free T4, Total T, Free T, Estradiol, SHBG, DHEA-S, LH, FSH, Vit D, B12, Folate, Ferritin, Iron Panel, RBC Mg, Homocysteine, hs-CRP, ESR, ApoB, Lp(a), Cortisol, PSA Total+Free
Added with Pro (\$549)	+4	LDL-P/NMR, IGF-1, Cystatin C, Omega-3/6 (serum)
Missing from ALL tiers	8-10	C-Peptide, TPO Ab, TgAb, Zinc, Selenium, Copper, Ceruloplasmin, Fibrinogen, LP-PLA2, Oxidized LDL
Uncertain	1	Prolactin listed as "Women only" -- may not be included for males

Key Features

Feature	Status	Detail
Dashboard/App	Web-only (no mobile app)	Color-coded; note: iOS "Mito" apps are a different B2B product
1:1 clinician consultation	Yes (included)	Virtual call with licensed functional medicine clinician
Garmin integration	No	No wearable integration of any kind
Data export	Lab reports accessible	No confirmed CSV; no API
MitoMD AI chatbot	Yes, unlimited 24/7	Trained on personal biomarker data
Cystatin C	Pro only (unique)	Only confirmed service offering this marker

Notable Strengths: Highest 45-panel coverage at Pro (36/45, 80%). Cystatin C in Pro (unique -- critical for muscular individuals). RBC Mg + B12 + Folate + ESR all in Core. 1:1 clinician included. Full 21-marker urinalysis. Y Combinator backed (S24).

Notable Weaknesses: Only 1 draw/year. No wearable integration. No mobile app. Very young company (founded June 2023, ~8 employees, \$4M funding). No CSV export confirmed. Prolactin may be excluded for males. Lab network confusion (LabCorp vs Quest vs both).

Trust note: Mito Health's Trustpilot profile shows 92% 5-star ratings with zero 1-star reviews across 101 reviews -- statistically atypical. This either indicates an exceptionally well-run service or selective review solicitation. Singapore-based company may also have limited US review volume.

S3a Cross-Service Comparison

Service	Annual Price	Draws/Year	Cost/Draw	Directly Measured	45-Panel Base Coverage
Function Health	\$365	2	\$182.50	~92/draw	32/45 (71%)
Hundred Health	\$199	2	~\$99.50	~71	21/45 (47%)
Superpower (Base+Adv)	\$388	1	\$388	~87	33-34/45 (73-76%)
Superpower (Baseline)	\$199	1	\$199	~55	17/45 (38%)
Mito Health Pro	\$549	1	\$549	~87-95	36/45 (80-82%)
Mito Health Core	\$349	1	\$349	~75-80	30/45 (67%)

Coverage count reconciliation notes: Function Health was recounted from an initial 33/45 to 32/45 (B12 downgraded from direct to indirect/proxy via MMA). Hundred Health's prior \$499 panel scored **29/45** (~104-117 measured); the current [hundred.com/what-we-test](#) page itemizes a reduced ~100+ panel, so under like-for-like collapsed framing this is now **21/45 (47%)** of the priority slots (~71 measured under the uniform granular convention). Mito Core was recounted from an initial 32/45 to 30/45 (Prolactin uncertain for males, plus stricter counting of shared markers). All figures in this report use the recounted values.

Tests Missing from ALL 4 Confirmed Services (gap-fill required regardless of choice):

Test	Category	Est. Gap-Fill Cost (Marek)	Priority
C-Peptide	Metabolic	\$26	VITAL -- differentiates insulin resistance from beta cell dysfunction
Fibrinogen	Inflammation	\$50	VITAL -- independent CV/clotting risk, not redundant with hs-CRP
LP-PLA2	Cardiovascular	\$60	VITAL -- vascular-specific inflammation, not redundant with hs-CRP
Oxidized LDL	Cardiovascular	\$56-75	Optional -- ApoB + NMR + LP-PLA2 already cover CV risk
Copper	Vitamins/Minerals	\$34	Should get -- completes Cu:Zn serum ratio (optimal Cu:Zn 0.7-1.0 by serum concentration; FH already tests Zinc)
Ceruloplasmin	Vitamins/Minerals	\$20	Should get -- enables free copper calculation
Selenium	Vitamins/Minerals	~\$25	Should get -- thyroid cofactor; missing from all base tiers; available as FH add-on

Unique Differentiators by Confirmed Service:

Differentiator	Function	Hundred	Superpower	Mito
Garmin integration	No	Yes (confirmed)	Yes (Mar 2026, unverified)	No
Medical record import (450+ EHR)	No	Yes (unique)	Upload past blood work	Upload past labs
1:1 clinician consultation	No	Clinician protocol	Health coaches only	Yes (unique)
Cystatin C	No	No	No	Pro only (unique)
Full NMR LipoProfile (base)	Yes	No -- now absent	No (fractionation in Adv)	Pro only
Thyroid antibodies (base)	Yes (unique at base)	No	Advanced only	No
RBC Magnesium (base)	Yes	No	No	Yes
B12 + Folate (base)	Indirect B12 / Add-on Folate	No	Advanced only	Yes (unique at base)
ESR (base)	No	No	Advanced only	Yes
2 draws/year included	Yes	Yes	No	No

S3b. Discovered Service Profiles

1. SiPhox Health (\$450/year) | siphoxhealth.com

Category: At-home capillary blood testing (needle-free) | **SCORED WITH FLAG (borderline DQ-2)**

Metric	Detail
Annual: \$450/yr U360 biannual (2 draws)	Longevity Essentials: \$250/yr
Standardized count: ~45 directly measured (U360)	~10-12 calculated ratios inflate "60" claim
45-panel coverage: 24/45 (53%)	NO CBC possible (capillary limitation)
Garmin: Uncertain (claims 300+ devices but official list omits Garmin)	Data export: PDF yes; CSV unclear
Trust: Founded 2020 (YC S20), Trustpilot 4.5/5 (568 reviews), \$27M Series A	
Key strength: Maximum convenience (fully at-home, no needles); unique markers (C-Peptide, Cystatin C)	
Key weakness: Documented accuracy problems: 300%+ testosterone discrepancy, 600%+ vitamin D variance vs venous; SiPhox's own disclaimer: "SiPhox testing is not a substitute for your annual bloodwork" (siphoxhealth.com/hub/guides/what-we-dont-measure); 5-15% sample failure rate; no named CMO	

2. WHOOP Advanced Labs (\$588/year) | whoop.com

Category: Wearable-integrated blood testing (requires WHOOP)

Metric	Detail
Annual: \$588/yr (WHOOP \$239 + 2 labs \$349)	4 tests: \$838/yr
Standardized count: ~50-55 directly measured	Claims 65
45-panel coverage: ~24-25/45 estimated	No Free T3/T4, no GGT, no Cystatin C, no PSA

Metric	Detail
Garmin: No (WHOOP only)	Data export: Yes (PDF; WHOOP data exportable)
Trust: WHOOP founded 2012; Labs launched Sept 2025	
Key strength: Deep wearable-biomarker correlation (HRV/sleep/strain); Omega-3 Index included (rare); Lp(a) + Homocysteine + ApoB all in base	
Key weakness: Requires WHOOP ecosystem; no Garmin; limited thyroid (TSH only)	

3. Empirical Health (\$190-\$399/year) -- Borderline

Category: Heart-health-focused blood testing | **SCORED WITH FLAG (borderline DQ-2, no hormones)**

Metric	Detail
Annual: \$190 one-time (1 draw) or \$399/yr Advanced (3 draws + MD review)	
Standardized count: ~45-50 directly measured	"100+" is inflated
45-panel coverage: ~25-30/45 estimated	No hormones at all (no testosterone, estradiol, cortisol, DHEA-S, SHBG)
Trust: Founded 2023 (YC S23), 3 Trustpilot reviews	
Key weakness: Complete absence of hormone panel makes it inadequate as a comprehensive longevity panel; heart-health only	

4. InsideTracker (\$829/year) | insidetracker.com

Category: Data-driven biomarker analytics platform

Metric	Detail
Annual: \$829/yr (membership \$149 + 2 Ultimate tests \$680)	4 tests: \$1,509/yr
Standardized count: ~43-48 directly measured	Claims "up to 48 directly analyzed"
45-panel coverage: ~22/45 (49%) per S5 coverage matrix	No Lp(a), Homocysteine, Free T3/T4, DHEA-S (male), PSA

Note on coverage discrepancy: Research file 11-additional-services.md estimates ~28-32/45 for InsideTracker, while the S5 coverage matrix yields ~22/45 at the target-test level. The difference arises because the research estimate likely used a less strict counting methodology. The S5 matrix figure (~22/45) is adopted as authoritative since it applies the standardized per-marker YES/NO methodology used for all services. Priority Coverage Score 4 (22-24/45 range) is assigned accordingly. | **Garmin: YES (native, confirmed)** | **Data export: YES (CSV + PDF)** | | **Trust:** Founded 2009 (MIT/Harvard/Tufts scientists), 100K+ customers, Trustpilot 4.1/5 (617 reviews) | | **Key strength:** Only service with confirmed native Garmin sync + CSV export + 30 past result uploads/yr | | **Key weakness:** Expensive for biomarker count (\$17.27/marker); no Lp(a), Homocysteine, Estradiol, or DHEA-S for males; no clinician consultation |

5. Ultrahuman Blood Vision (\$499/year)

Category: Wearable-integrated blood testing | **SCORED WITH FLAG (LOW confidence)**

Metric	Detail
Annual: \$499/yr (2 draws)	Single Essentials: \$99

Metric	Detail
Standardized count: ~80-100+ estimated	Individual biomarker names NOT published
45-panel coverage: UNKNOWN (unverifiable)	16 panel categories
Garmin: Indirect (via Terra API)	Data export: YES (CSV/XML confirmed)
Trust: Ultrahuman founded 2019 (Bangalore); Blood Vision US launch July 2025, 530 Trustpilot reviews	
Key strength: Broadest category coverage (16 panels incl. autoimmune, heavy metals, urinalysis); CSV/XML export; Vision Cloud for uploading external results	
Key weakness: Individual biomarker names not published -- verification impossible; Garmin only indirect	

6. Lifeforce (\$599-\$1,838/year) | mylifeforce.com

Category: Telehealth + testing + pharmacy hybrid

Metric	Detail
Annual: \$599/yr (2 draws, 1 consult)	Monthly: \$1,838/yr (4 draws, 4 consults)
Standardized biomarker count: ~48 directly measured (uniform count — CBC/CMP sub-components counted individually as for every service)	~41 clinically-distinct excl. CBC/CMP padding; ~64 with all add-ons (+\$800)
45-panel coverage: ~18-22/45 base (40-49%)	~25-28/45 with add-ons
Garmin: No	Data export: Not confirmed
Trust: Founded 2021, Trustpilot 4.3/5 (172 reviews)	
Key strength: Prescribing capability unique among testing services	
Key weakness: limited 45-panel coverage (~18-22/45, no specialty markers — no Lp(a), IGF-1, Free T3, Homocysteine, Cystatin C, Omega-3, autoimmune, metals, NMR); no wearable; 10 states only; supplement upsell with conflict-of-interest concerns	

Co-founder overlap note: Lifeforce co-founders Tony Robbins and Peter Diamandis also co-founded Fountain Life (disqualified, DQ-6). This shared leadership means these are not independent companies -- recommendations involving either service should account for this relationship.

7. Parsley Health Longevity Labs (\$350/year) | parsleyhealth.com

Category: Functional medicine practice with standalone lab product | **SCORED WITH FLAG (LOW confidence)**

Metric	Detail
Annual: \$350/yr (1 draw)	Clinical Review: \$550/yr (+ 30-min visit)
Standardized count: ~72-76 inferred (LOW confidence)	Biomarker list NOT published
45-panel coverage: ~20-24/45 estimated (LOW confidence)	Male panel uncertain -- originally female-focused
Garmin: No	Data export: Not documented

Metric	Detail
Trust: Founded 2016, Trustpilot 4.0/5 (26 reviews), BBB D-	
Key weakness: No published biomarker list (major transparency gap); male panel uncertain; BBB D-; 20-day support response; supplement upselling	
Additional product: BYO Labs Review (\$250 one-time) -- bring your own lab results for a clinician consultation with 14-day messaging. Not a testing product but may be useful for interpreting results from other services.	

8. Geviti (\$1,529/year)

Category: Longevity + prescribing platform | **SCORED WITH FLAG (LOW confidence)**

Metric	Detail
Annual: \$1,529/yr Plus (2 draws)	Free tier: \$0 (no draws)
Standardized count: ~70-80 directly measured estimated	Claims 100-115+ (ratio inflation)
45-panel coverage: UNKNOWN (individual list not fully published)	Confirmed: Lp(a), Homocysteine, IGF-1, Free T3/T4, TPO Ab
Garmin: Not confirmed	Data export: Not confirmed
Trust: Founded ~2023, no Trustpilot page	
Key weakness: \$21.84/biomarker; Rx upsell pressure; unpublished biomarker list; very new	

9. Wild Health (~\$4,345/year) | wildhealth.com

Category: Physician-led concierge precision medicine

Metric	Detail
Annual: ~\$4,345/yr Standard (4 quarterly draws + visits)	Premium: \$25,000/yr
Standardized biomarker count: ~58 directly measured (uniform count — CBC/CMP/Lipid panels expanded to standard components as for every service; ~30-35 individually named markers are confirmed)	Claims "65-68+" (unverifiable)
45-panel coverage: ~14-15/45 base (31-42%) -- worst coverage	Many key markers are add-ons at unknown cost
Garmin: No	Data export: Not confirmed; users report difficulty
Trust: Founded 2006 (precision medicine pivot ~2018-2020), Reviews.io 3.9/5 (59 reviews)	
Key strength: Genetic analysis (700K+ SNPs), TruDiagnostic epigenetic bio age 2x/yr, quarterly physician visits. Published clinical outcomes: 69% CRP reduction, 47% HbA1c improvement, 58% LDL-P reduction for at-risk patients	
Key weakness: \$74.90/biomarker (worst value); billing fraud allegations (\$2K+ charges after cancel); 4+ month DNA delays; no published biomarker list	

10. Fountain Life (\$10,500+/year) | fountainlife.com

Category: Premium center-based longevity diagnostics | **DISQUALIFIED (DQ-6: no standalone blood option)**

Metric	Detail
Annual: \$10,500/yr CORE minimum	Includes full-body MRI, cardiac CT, DEXA, WGS, blood panel
Standardized count: ~75-90 confirmed from public sources	No public biomarker list
Garmin: Yes (confirmed)	Prescribing: Yes (HRT, peptides, NAD+)
Key issue: Blood panel bundled at \$10,500+ minimum; no standalone purchase	
Co-founder overlap: Co-founders Tony Robbins and Peter Diamandis also co-founded Lifeforce (see the Lifeforce profile in S3b)	

Disqualified Services

Service	Reason
Forward	Shut down Nov 2024; burned \$650M in VC funding
Fountain Life	Blood panel bundled at \$10,500+ min; no standalone
OneTwenty	Closed beta, ~25 members
Oura Health Panels	~35-40 directly measured (<50 threshold)
Elo Health	Only 12 biomarkers
Jinfiniti AgingSOS	Max 47 biomarkers; not membership model
Marek Health	A-la-carte only (not membership); recommended for gap-fill
Prenuvo	Blood testing bundled with MRI; <50 blood markers
TSquared Health	Singapore only
Tally Health	Not blood testing (epigenetic cheek swab)
Nucleus Genomics	Not blood testing (DNA only)

S4. Scoring Methodology (Output 2)

Category weights: Priority Coverage 15% · Total Coverage 20% · Value 30% · Frequency 10% · Unique Features 10% · Data Access 10% · Convenience 5%.

Confidence discount (§4.6): services that do not publish their biomarker list have Priority Coverage, Total Coverage, and the Value cost-efficiency leg $\times 0.5$ (Ultrahuman, Geviti, Parsley); absolute affordability is never discounted, since the annual price is a verified fact.

4.1 Weighted Scoring Categories

Rank	Category	Weight	What is Scored
1	Priority Coverage	15%	Coverage of the 45-test target panel. How many of 45 are directly measured in the base membership?
2	Total Coverage	20%	Total directly measured biomarkers beyond the 45-panel. Breadth of categories (autoimmunity, heavy metals, omega, NMR, urinalysis).

Rank	Category	Weight	What is Scored
3	Value	30%	Cost-effectiveness as a 50/50 blend of two legs: (1) cost-efficiency = price per directly measured biomarker + draws/year, and (2) affordability = absolute annual cost. A service must be both efficient and affordable to score high.
4	Frequency	10%	Draws included per year, cost of additional draws, trend tracking capability, ongoing monitoring support.
5	Unique Features	10%	Meaningful differentiators: Garmin sync, medical record import, clinician consultation, NMR included, Cystatin C, biological age, prescribing, protocols.
6	Data Access	10%	Numerical results provided (required), PDF/CSV export, wearable integration, medical record import, API access, data portability.
7	Convenience	5%	At-home draw option, turnaround time, app quality (web/iOS/Android), lab network size, state availability, scheduling ease.

4.2 Scoring Rubrics (1-10 Scale)

Aggregation rule: When a rubric level has multiple sub-criteria (e.g., the Value cost-efficiency leg uses \$/biomarker AND draws/yr), the assigned score equals the **LOWEST qualifying sub-criterion**. This ensures no service receives credit for criteria it fails to meet. For the cost-efficiency leg, the top three tiers (8-10) require 2+ draws/yr, so a single-draw service that otherwise qualifies on price is capped at 7. **Value itself is then the average of two equally-weighted legs — cost-efficiency and affordability — each scored 1-10 (see the Value rubric below).**

Priority Coverage (15%)

Score	Criteria
10	40+/45 directly measured in base
9	37-39/45
8	34-36/45
7	31-33/45
6	28-30/45
5	25-27/45
4	22-24/45
3	19-21/45
2	15-18/45
1	<15/45

Counting method: Per standardized methodology -- "Directly measured unique analytes, base tier, single draw." Calculated ratios, add-on panels, and double-draw counts excluded. The 45-test panel is the defined coverage target used by this report for the Priority and Total Coverage categories; it reflects a comprehensive longevity-oriented panel but is a specific target, not a universal standard.

Total Coverage (20%)

Score	Criteria
10	120+ directly measured, 10+ categories, NMR + autoimmunity + heavy metals + omega
9	100-119 directly measured, 9+ categories, NMR + 2 of (autoimmunity, heavy metals, omega)

Score	Criteria
8	85-99 directly measured, 8+ categories, NMR included
7	70-84 directly measured, 7+ categories
6	60-69 directly measured, 6+ categories
5	50-59 directly measured, 5+ categories
4	40-49 directly measured, 4+ categories
3	30-39 directly measured, 3+ categories
2	20-29 directly measured
1	<20 directly measured

Value (30%)

Value is a **50/50 blend of two equally-weighted legs**, each scored 1-10:

$$\text{Value} = (\text{Cost-Efficiency} + \text{Affordability}) / 2$$

This rewards a service for being *both* efficient (low cost per test) *and* affordable in absolute terms — a \$4,345 service and a \$199 service with the same cost-per-biomarker are not equal value against a real budget. A customer with \$250 to spend cannot access a \$549 service no matter how efficient it is per marker.

Leg 1 — Cost-Efficiency (price per directly-measured biomarker; tiers 8-10 require 2+ draws/yr, so a single-draw service is capped at 7):

Score	Criteria
10	<\$3/biomarker, 2+ draws/yr
9	\$3-4/biomarker, 2+ draws/yr
8	\$4-5/biomarker, 2+ draws/yr
7	\$5-6/biomarker (any draws)
6	\$6-8/biomarker
5	\$8-10/biomarker
4	\$10-15/biomarker
3	\$15-25/biomarker
2	\$25-50/biomarker
1	>\$50/biomarker

Leg 2 — Affordability (total annual price; lower price = accessible to more budgets):

$$\text{Affordability} = 10 - 3 \cdot \log_2(\text{annual price} \div \$200), \text{ clamped to } [1, 10] \text{ and rounded to the nearest integer.}$$

The anchor is \$200/yr = 10, and halving (doubling) the price gains (costs) 3 points — so absolute price differences at the budget end of the market matter most, matching how a fixed health budget actually constrains the choice. Worked examples:

Annual price	\$199	\$349	\$365	\$450	\$549	\$588	\$829	\$1,529	\$4,345
Affordability	10	8	7	6	6	5	4	1	1

Both legs are integers, so the blended Value always lands on a 0.5 step. The prior "cost to reach the 45-test panel" sub-criterion remains removed: it reflected a personalized coverage target rather than general value, and panel breadth is already scored in Priority Coverage and Total Coverage. For services that do not publish their biomarker list, the **Cost-Efficiency leg is $\times 0.5$** (§4.6) because its denominator (the measured-marker count) is unverifiable; the **Affordability leg is never discounted**, since the annual price is a verified fact.

Frequency (10%)

Score	Criteria
10	4+ draws/yr, affordable additional (<\$150), excellent trending
9	4 draws/yr, good trending
8	2-3 draws/yr, additional <\$200, trending
7	2 draws/yr, trending available
6	2 draws/yr but Draw 2 reduced, OR 1 draw/yr with affordable retesting
5	1 draw/yr, additional available but expensive (\$200+)
4	1 draw/yr, additional pricing unclear/expensive
3	1 draw/yr, no clear retest option
2	1 draw/yr, tests purchased separately
1	No recurring draw model

Unique Features (10%)

Score	Criteria
10	5+ meaningful differentiators incl. Garmin + medical record import + clinician + NMR + Cystatin C + prescribing
9	4-5 meaningful differentiators
8	3-4 meaningful differentiators
7	2-3 meaningful differentiators
6	1-2 meaningful differentiators
5	Standard feature set, nothing notably unique or absent
4	Missing several expected features
3	Bare-bones feature set
2	Features actively impede use (supplement upselling, broken integrations)
1	No differentiating features; actively misleading claims

Data Access (10%)

Score	Criteria
10	Numerical results + PDF + CSV + API + wearable integration (data in AND out)

Score	Criteria
9	Numerical results + PDF + CSV + wearable integration
8	Numerical + PDF + CSV export — OR — numerical + PDF + confirmed wearable integration + automated medical-record/EHR import (data consolidation)
7	Numerical results + PDF + data download/delete
6	Numerical results + PDF export
5	Numerical results visible + limited export (PDF only)
4	Numerical results visible but no confirmed export
3	Results visible but export uncertain/user complaints
2	Results provided but difficult to access
1	No numerical results = DISQUALIFIED

Data portability is scored on both axes — export (PDF/CSV/API) AND automated record import/consolidation. Scores 9–10 still require raw CSV/API export (data out); a service strong on consolidation but lacking raw export is capped at 8.

Convenience (5%)

Score	Criteria
10	At-home included + <5 days + excellent app (4.5+) + 5K+ locations + 48+ states
9	At-home available + <7 days + good app + 2K+ locations + 48+ states
8	Major lab network + <7 days + good app + 2K+ locations + 48+ states
7	Major lab network + 7-14 days + decent app + 48+ states
6	Lab draw + 1-2 weeks + web+mobile + most states
5	Lab draw + 2-3 weeks + web only OR limited states
4	Lab draw + slow (3+ weeks) + app quality issues
3	Limited lab network OR significant state restrictions
2	Center-based only (few locations)
1	Travel to specific center + limited availability + slow results

4.3 Disqualification Criteria

#	Criterion	Rationale
DQ-1	Does not provide numerical test results	Data access is non-negotiable
DQ-2	Fewer than 50 directly measured biomarkers	Insufficient breadth
DQ-3	Not available in the United States	This comparison is US-focused
DQ-4	Service no longer operational	Cannot purchase
DQ-5	Closed beta / not publicly available	Cannot make purchasing decision
DQ-6	Blood testing not available as standalone product	Must be separable from \$10K+ bundles

4.4 Disqualification Decisions

Service	Status	Grounds
Forward	DISQUALIFIED	DQ-4: Shut down Nov 2024
Fountain Life	DISQUALIFIED	DQ-6: Blood panel bundled at \$10,500+
OneTwenty	DISQUALIFIED	DQ-5: Closed beta, ~25 members
Oura Health Panels	DISQUALIFIED	DQ-2: ~35-40 biomarkers
Elo Health	DISQUALIFIED	DQ-2: Only 12 biomarkers
Jinfiniti AgingSOS	DISQUALIFIED	DQ-2: Max 47; not membership model
Marek Health	DISQUALIFIED	Not a membership model (a-la-carte only)
Prenuvo	DISQUALIFIED	DQ-6: Bundled with MRI; <50 blood markers
TSquared Health	DISQUALIFIED	DQ-3: Singapore only
Tally Health	DISQUALIFIED	DQ-2: Not blood testing
Nucleus Genomics	DISQUALIFIED	DQ-2: Not blood testing

4.5 Borderline / Conditional Services

Service	Issue	Decision
SiPhox Health	~45 directly measured; accuracy concerns	SCORED WITH FLAG
Parsley Health	Biomarker list not published; male panel uncertain	SCORED WITH FLAG
Lifeforce	~48 directly measured (uniform count)	SCORED WITH FLAG
Wild Health	~58 directly measured (uniform; ~30-35 named markers confirmed)	SCORED WITH FLAG
Empirical Health	~45-50 measured; no hormones	SCORED WITH FLAG
Ultrahuman Blood Vision	100+ claimed; individual markers not published	SCORED WITH FLAG
Geviti	100+ claimed; individual markers not published	SCORED WITH FLAG

4.6 Confidence Discount (unpublished biomarker lists)

Three services — Ultrahuman Blood Vision, Geviti Plus, and Parsley Longevity Labs — do not publish their individual biomarker lists, so their Priority Coverage, Total Coverage, and Value **cost-efficiency leg** rest on unverifiable vendor claims rather than a documented panel. To prevent unverifiable claims from out-ranking services that disclose their panels, those inputs are multiplied by 0.5 for these three services. The **affordability leg of Value is not discounted** — the annual price is a verified fact regardless of how many biomarkers it buys — and the remaining categories (observable features and logistics) are unaffected. Raw assessed scores are shown in S7; the confidence-adjusted totals are used for ranking. Rationale: a service that will not disclose what it tests should not outrank, on the strength of that undisclosed panel, services that do disclose.

S5. Coverage Matrix (Output 3)

Column Key (ranked order): HH = Hundred Health, FH = Function Health, SP-A = Superpower Base+Advanced, MP = Mito Pro, MC = Mito Core, SP-B = Superpower Baseline, SiP = SiPhox, WP = WHOOP, IT = InsideTracker, LF = LifeForce

Cell Legend:  = directly measured in base |  = not offered | CALC = calculated/derived | ADD = add-on at extra cost | ? = unverified

Excluded from matrix: Forward (shut down), Wild Health (no published list), Ultrahuman (no published list), Geviti (no published list), Fountain Life (no standalone tier), Parsley (no published list), Empirical (no hormones), OneTwenty (closed beta).

1. CBC (Complete Blood Count with Differential)

Biomarker	45P	HH	FH	SP-A	MP	MC	SP-B	SiP	WP	IT	LF
WBC	45P										
RBC	45P										
Hemoglobin	45P										
Hematocrit	45P										
MCV	45P	CALC	CALC								CALC
RDW	45P										
Platelet Count	45P										
Neutrophils	45P										
Lymphocytes	45P										
Monocytes	45P										
Eosinophils	45P										
Basophils	45P										

SiPhox cannot perform CBC from capillary blood.

2. CMP (Comprehensive Metabolic Panel)

Biomarker	45P	HH	FH	SP-A	MP	MC	SP-B	SiP	WP	IT	LF
Glucose (fasting)	45P										
BUN	45P										
Creatinine	45P										
Sodium	45P										
Potassium	45P										
Chloride	45P										
CO2	45P										
Calcium	45P										

Biomarker	45P	HH	FH	SP-A	MP	MC	SP-B	SiP	WP	IT	LF
Total Protein	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Albumin	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Total Bilirubin	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
HbA1c	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Fasting Insulin	45P	✓	✓	✓	✓	✓	✗	✗	✓	✓	ADD
C-Peptide	45P	✗	✗	✗	✗	✗	✗	✓	✗	✗	✗
Uric Acid	45P	✗	✓	✓	✓	✓	✓	✗	✓	✗	ADD

C-Peptide uniquely available from SiPhox only (capillary, accuracy concerns). LifeForce Fasting Insulin requires \$200 Metabolic add-on.

3. Lipid / Cardiovascular

Biomarker	45P	HH	FH	SP-A	MP	MC	SP-B	SiP	WP	IT	LF
Total Cholesterol	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
HDL Cholesterol	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Triglycerides	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
LDL Cholesterol	45P	✓	CALC	CALC	CALC	CALC	CALC	CALC	CALC	CALC	CALC
ApoB	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Lp(a)	45P	✗	✓	✓	✓	✓	✗	✓	✓	✗	✓
LDL-P / NMR	45P	✗	✓	✓	✓	✗	✗	✗	✗	✗	ADD
Homocysteine	45P	✗	✓	✓	✓	✓	✗	✓	✓	✗	✓
hs-CRP	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Omega-3 Index (RBC)	45P	✗	✗	✗	ADD	✗	✗	✗	✓	✗	✗
LP-PLA2	45P	✗	✗	✗	✗	✗	✗	✗	✗	✗	✗
Oxidized LDL	45P	✗	✗	✗	✗	✗	✗	✗	✗	✗	✗
Fibrinogen	45P	✗	✗	✗	✗	✗	✗	✗	✗	✗	✗

LP-PLA2, Oxidized LDL, and Fibrinogen missing from all qualifying membership services (Fountain Life offers LP-PLA2 but is disqualified per DQ-6: no standalone blood option). WHOOP uniquely includes RBC Omega-3 Index. Function Health includes serum Omega-3 (not RBC Index). **Hundred Health:** Lp(a), LDL-P/NMR, and Homocysteine are not offered on the current \$199 panel (NO); ApoB and hs-CRP are retained (YES).

4. Thyroid

Biomarker	45P	HH	FH	SP-A	MP	MC	SP-B	SiP	WP	IT	LF
TSH	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Free T4	45P	✓	✓	CALC	✓	✓	CALC	✓	✗	✗	✓

Biomarker	45P	HH	FH	SP-A	MP	MC	SP-B	SiP	WP	IT	LF
TgAb	45P	✗	✓	✓	✗	✗	✗	✓	✗	✗	✗

Superpower baseline has substandard thyroid (TSH + T3 Uptake + Total T4 + calculated T7 index, not direct Free T3/ T4). SiPhox uniquely has full thyroid with both antibodies.

5. Hormones (Male Panel)

Biomarker	45P	HH	FH	SP-A	MP	MC	SP-B	SiP	WP	IT	LF
Total Testosterone	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Free Testosterone	45P	✓	✓	CALC	✓	✓	CALC	CALC	✓	✓	✓
Estradiol (E2)	45P	✓	✓	✓	✓	✓	✓	✓	✓	ADD	✓
SHBG	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
DHEA-S	45P	✗	✓	✓	✓	✓	✓	✓	✓	✗	✓
LH	45P	✓	✓	✓	✓	✓	✗	✓	✓	✗	✓
FSH	45P	✓	✓	✓	✓	✓	✗	✓	✓	✗	✓
Prolactin	45P	✗	✓	✓	?	?	✗	✓	✗	✗	✗
IGF-1	45P	✗	✗	✓	✓	✗	✗	✗	✗	✗	✓
Cortisol	45P	✗	✓	✓	✓	✓	✓	✓	✓	✓	✗
PSA Total	45P	✓	✓	✓	✓	✓	✗	✓	✗	✗	✓

Mito Prolactin may be women-only. InsideTracker DHEA-S only in female panel. Function Health IGF-1 NOT in base.
Note: Prolactin is a pituitary hormone; it is grouped with Sex Hormones here for clinical panel alignment, as most services bundle it with reproductive hormone panels.

6. Vitamins & Minerals

Biomarker	45P	HH	FH	SP-A	MP	MC	SP-B	SiP	WP	IT	LF
Vitamin D (25-OH)	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Ferritin	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Iron (serum)	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✗
TIBC	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✗
Vitamin B12	45P	✗	✗	✓	✓	✓	✗	✓	✓	✓	✗
Folate	45P	✗	ADD	✓	✓	✓	✗	✓	✗	✓	✗
RBC Magnesium	45P	✗	✓	✗	✓	✓	✗	✗	✗	✓	✗
Zinc	45P	✗	✓	✗	✗	✗	✗	✗	✗	✗	✗
Selenium	45P	✗	ADD	✗	✗	✗	✗	✗	✗	✗	✗
Copper	45P	✗	✗	✗	✗	✗	✗	✗	✗	✗	✗
Ceruloplasmin	45P	✗	✗	✗	✗	✗	✗	✗	✗	✗	✗

Selenium available only as Function Health add-on (Extended Vitamins/Minerals); missing from all other services. Ceruloplasmin missing from ALL services. Function Health tests MMA as B12 proxy, not direct B12. Folate also available as FH add-on. RBC Magnesium confirmed in Function Health, Mito Core/Pro, and InsideTracker (rare).

7. Inflammation

Biomarker	45P	HH	FH	SP-A	MP	MC	SP-B	SiP	WP	IT	LF
hs-CRP	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Homocysteine	45P	✗	✓	✓	✓	✓	✗	✓	✓	✗	✓
ESR	45P	✗	✗	✓	✓	✓	✗	✗	✗	✗	✗
Fibrinogen	45P	✗	✗	✗	✗	✗	✗	✗	✗	✗	✗
LP-PLA2	45P	✗	✗	✗	✗	✗	✗	✗	✗	✗	✗

Fibrinogen and LP-PLA2 missing from all qualifying membership services (Fountain Life offers LP-PLA2 but is disqualified per DQ-6). ESR available only in Superpower Advanced and Mito Core/Pro.

8. Kidney

Biomarker	45P	HH	FH	SP-A	MP	MC	SP-B	SiP	WP	IT	LF
Cystatin C	45P	✗	✗	✗	✓	✗	✗	✓	✗	✗	✗

Cystatin C available only from Mito Pro (\$549) and SiPhox -- critical for athletic individuals where creatinine-based eGFR is unreliable.

9. Liver

Biomarker	45P	HH	FH	SP-A	MP	MC	SP-B	SiP	WP	IT	LF
ALT	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
AST	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
ALP (Alkaline Phosphatase)	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
GGT	45P	✓	✓	✓	✓	✓	✓	✗	✗	✓	✗
Total Bilirubin	45P	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Direct Bilirubin	--	✗	✗	✓	✓	✓	✓	✗	✗	✗	✗
Indirect Bilirubin	--	✗	✗	CALC	CALC	CALC	CALC	✗	✗	✗	✗
Albumin	--	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Total Protein	--	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Globulin	--	CALC	CALC	CALC	CALC	CALC	CALC	✗	CALC	CALC	CALC

GGT missing from Liferforce, WHOOP, and SiPhox. Superpower and Mito both include Direct Bilirubin. Albumin, Total Protein, Globulin also counted in CMP but shown here for liver context.

10. Autoimmunity

Biomarker	45P	HH	FH	SP-A	MP	MC	SP-B	SiP	WP	IT	LF
ANA Screen	--	✗	✓	ADD	ADD	ADD	✗	✗	✗	✗	✗
ANA Titer	--	✗	✓	ADD	✗	✗	✗	✗	✗	✗	✗
ANA Pattern	--	✗	✓	ADD	✗	✗	✗	✗	✗	✗	✗
Rheumatoid Factor (RF)	--	✗	✓	ADD	ADD	ADD	✗	✗	✗	✗	✗
TPO Antibodies	45P	✗	✓	✓	✗	✗	✗	✓	✗	✗	✗
TgAb	45P	✗	✓	✓	✗	✗	✗	✓	✗	✗	✗
CCP Antibody	--	✗	✗	ADD	ADD	ADD	✗	✗	✗	✗	✗
Celiac Panel	--	✗	✗	ADD	✗	✗	✗	✗	✗	✗	✗

Function Health includes ANA (screen/titer/pattern) + RF in base. Hundred Health **previously** included ANA (screen/titer/pattern) in base; the full ANA panel is now **not offered** on the current \$199 panel (NO). Superpower autoimmunity is \$139 add-on only. Mito offers \$69 autoimmune screen add-on. TPO and TgAb also listed under Thyroid section above.

11. Cancer Screening

Biomarker	45P	HH	FH	SP-A	MP	MC	SP-B	SiP	WP	IT	LF
PSA Total	45P	✓	✓	✓	✓	✓	✗	✓	✗	✗	✓
PSA Free	--	✗	✓	✓	✓	✓	✗	✗	✗	✗	✗
PSA % Free	--	✗	CALC	✗	✗	✗	✗	✗	✗	✗	✗
Galleri Multi-Cancer	--	ADD	ADD	ADD	ADD	ADD	ADD	✗	✗	✗	✗

InsideTracker and WHOOP both missing PSA. Hundred Health: PSA Total retained in base; PSA Free / % Free not offered on the current \$199 panel (NO). Galleri available as add-on from Function (\$899), Superpower (\$849), Hundred ("**Coming Q1 2026**" — not confirmed live as of 2026-06-08, no published price), Mito Ultra (\$949 or \$1,699 tier). **Galleri PPV caveat:** Galleri's positive predictive value is 38-44%, meaning 56-62% of positive results are false positives. This is important context for anyone considering the add-on -- a positive Galleri result requires confirmatory testing and should not be interpreted as a diagnosis.

12. Heavy Metals / Toxins

Biomarker	45P	HH	FH	SP-A	MP	MC	SP-B	SiP	WP	IT	LF
Lead	--	✗	✓	ADD	✓	ADD	✗	✗	✗	✗	ADD
Mercury	--	✗	✓	ADD	✓	ADD	✗	✗	✗	✗	ADD
Arsenic	--	✗	✗	ADD	✓	ADD	✗	✗	✗	✗	ADD
Cadmium	--	✗	✗	ADD	✗	✗	✗	✗	✗	✗	✗
20-metal urine panel	--	✗	✗	ADD	✗	✗	ADD	✗	✗	✗	✗
27-marker enviro toxins	--	✗	✗	ADD	✗	✗	ADD	✗	✗	✗	✗

Function Health includes Lead + Mercury in base. Hundred Health **previously** included Lead only; the heavy-metals category is gone from the current \$199 panel and Lead is now **not offered** (NO). Mito Pro adds Lead, Mercury, Arsenic. Superpower heavy metals (\$129) and enviro toxins (\$299) are urine-based add-ons. SiPhox cannot test heavy metals from capillary blood.

13. Urinalysis

Biomarker	45P	HH	FH	SP-A	MP	MC	SP-B	SiP	WP	IT	LF
Full Urinalysis (15-27 params)	--	✓	✓	✓	✓	✓	✗	✗	✗	✗	✗
Urine pH	--	✓	✓	✓	✓	✓	✗	✗	✗	✗	✗
Urine Specific Gravity	--	✓	✓	✓	✓	✓	✗	✗	✗	✗	✗
Urine Protein	--	✓	✓	✓	✓	✓	✗	✗	✗	✗	✗
Urine Glucose	--	✓	✓	✓	✓	✓	✗	✗	✗	✗	✗
Urine Ketones	--	✓	✓	✓	✓	✓	✗	✗	✗	✗	✗

Function Health 16-marker urinalysis in Annual draw. Superpower 15-marker in Advanced only. Hundred Health 27-parameter urinalysis still present on the current page (retained, YES); baseline noted 2x/yr but the live page no longer states frequency. Mito 21-marker urine panel in Core.

14. Other / Specialty

Biomarker	45P	HH	FH	SP-A	MP	MC	SP-B	SiP	WP	IT	LF
Amylase	--	✗	✓	✗	✓	✓	✗	✗	✗	✗	✗
Lipase	--	✗	✓	✗	✓	✓	✗	✗	✗	✗	✗
Creatine Kinase (CK)	--	✗	✗	✗	✗	✗	✗	✗	✗	✓	✗
Biological Age	--	CALC	CALC	CALC	CALC	CALC	CALC	ADD	✗	ADD	✓
Adiponectin	--	✗	✗	✗	✗	✗	✗	✗	✗	✗	ADD
Glycomark (1,5-AG)	--	✗	✗	✗	✗	✗	✗	✗	✗	✗	ADD
Beta Amyloid 42/40	--	✗	✗	✗	✗	✗	✗	✗	✗	✗	ADD
pTau-217	--	✗	✗	✗	✗	✗	✗	✗	✗	✗	ADD

Lifeforce brain protection panel (\$200 add-on) includes Beta Amyloid, pTau-217, GFAP, ApoE genotype. InsideTracker uniquely includes Creatine Kinase. Biological age offered by most services but methodologies vary (blood-algorithm vs. epigenetic/DNA methylation).

Summary: 45-Test Target Panel Coverage

Metric	HH	FH	SP-A	MP	MC	SP-B	SiP	WP	IT	LF
Directly measured from 45	21	32	~33	36	30	17	24	~24	~22	~20
Coverage %	47%	71%	73%	80%	67%	38%	53%	53%	49%	44%
Annual cost	\$199	\$365	\$388	\$549	\$349	\$199	\$450	\$588	\$829	\$599
Cost per 45P test covered	\$9.48	\$11	\$12	\$15	\$12	\$12	\$19	\$25	\$38	\$30

HH denominator note: This row is **\$/45-panel-test-covered** ($\$199 \div 45\text{-panel hits: } \$199 \div 21 = \$9.48$) — a *different* metric from the **\$/directly-measured-biomarker** "\$2.80" shown in S2, S6.1, and S7.2 ($\$199 \div \text{measured count}$). They are not in conflict; they use different denominators. See S6.1 footnote ^4 for the full key.

Key Findings

1. **No single service covers all 45 target tests.** Best coverage: Mito Health Pro at 36/45 (80%).
 2. **Three biomarkers missing from all qualifying membership services:** Fibrinogen, LP-PLA2, Oxidized LDL. Require standalone ordering. (Fountain Life offers LP-PLA2 but is disqualified per DQ-6.)
 3. **Ceruloplasmin missing from ALL services. Selenium available only as FH add-on.** Copper also missing from all except Wild Health (add-on, excluded from matrix).
 4. **C-Peptide uniquely available from SiPhox only** -- at-home capillary with accuracy concerns. No venous-draw service offers C-Peptide.
 5. **Cystatin C available only from Mito Pro and SiPhox** -- critical gap for muscular/athletic individuals.
 6. **Best value for 45-panel coverage:** Function Health ($\$365, 32/45 = \$11/\text{test}$) and Mito Core ($\$349, 30/45 = \$12/\text{test}$).
 7. **WHOOP Advanced Labs is the only service offering Omega-3 Index** in the standard panel. (Whether this is a true RBC membrane assay or serum-based is unverified.)
-

S6. Feature Comparison Matrix (Output 4)

Service abbreviations (columns in ranked order): HH = Hundred Health, FH = Function Health, SP = Superpower, MH = Mito Health (Pro/Core), SX = SiPhox Health, WP = WHOOP Advanced Labs, EH = Empirical Health, IT = InsideTracker, LF = Lifestructure, UH = Ultrahuman Blood Vision, PH = Parsley Health, WiH = Wild Health, GV = Geviti, FL = Fountain Life (disqualified). *(In the S5 coverage grids, SP-A = Superpower Base+Advanced, SP-B = Superpower Base, MP = Mito Pro, MC = Mito Core, SiP = SiPhox.)*

Forward (shut down) and OneTwenty (closed beta) excluded.

1. Pricing & Value

Feature	HH	FH	SP	MH Pro	MH Core	SX U360	WP	EH	IT	LF Annual	UH	PH	WiH Std	GV
Price/year	\$199	\$365	\$199-388	\$549	\$349	~\$450	~\$588	\$399	~\$829	\$599	\$499	\$350	~\$4,345	~\$1,529

HSA/FSA	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Not confirmed	Yes	Yes	Mentioned	Yes	Yes	Yes

^1 Cost/biomarker methodology: Annual price / directly measured unique analytes (base tier, single draw). Excludes calculated/derived ratios and add-on panels. Panel components are counted at the parameter level for every service — CBC/CMP components and published urinalysis parameters individually, with subtype groups (crystal/cast/epithelial) collapsed to one finding each (uniform granularity, corrected 2026-06-10). This standardized denominator may differ from service-reported figures. **Every service — Lifestructure and Wild Health included — is counted the same way:** Lifestructure's CBC/CMP sub-components are now counted individually like every other service (~48 directly measured, \$12.48/marker), and Wild Health's CBC/CMP/Lipid panels are expanded to their standard component counts (~58 directly measured, \$74.90/marker). No service uses a stricter or looser standard than any other.

^4 Hundred Health \$/biomarker — two distinct metrics appear in this report; do not conflate: (a) **\$/directly-measured-biomarker** = \$199 ÷ measured count = **\$2.80** (\$199 ÷ ~71 measured under the uniform granular convention). This is the figure shown in this S6.1 row and quoted in S2 / S7.2 as HH's headline "\$2.80." (b) **\$/45-panel-test-covered** = \$199 ÷ 45-panel hits, a *different denominator* shown only in the S5 coverage-summary row: **\$9.48** = \$199 ÷ 21. So S2/S6.1/S7.2 "\$2.80" and S5 "\$9.48" are not in conflict — they divide by measured-markers vs by 45-panel-tests-covered respectively.

Key Differentiators at a Glance

Differentiator	Best Service(s)
Lowest annual cost (comprehensive)	Superpower (\$199/yr base); Empirical (\$399/yr 3 draws)
Most draws/year included	Wild Health (4); WHOOP (up to 6 at \$899)
Best cost per biomarker	HH ~\$2.80 ; SP Base ~\$3.62; FH ~\$3.97; SP B+A ~\$4.46 — <i>HH figure is \$/directly-measured-biomarker on its ~71-marker granular count; see S6.1 ^4. Caveat: HH's low \$/biomarker reflects a reduced panel without the specialty markers, not broader coverage.</i>
Garmin integration (confirmed)	InsideTracker (confirmed); Hundred Health (confirmed) — at \$199/yr the lowest-cost confirmed-Garmin option evaluated ; Superpower (v1.0.6, unverified); Fountain Life (claimed)
CSV data export	InsideTracker; Ultrahuman (CSV/XML)
Medical record import (automated)	Hundred Health (450+ EHR systems)
1:1 clinician included	Mito Health; Lifeforce; Wild Health; Geviti
Prescribing capability	Lifeforce (TRT, peptides); Geviti (HRT, GLP-1s); Fountain Life; Wild Health (non-DEA)
Biological age (DNA methylation)	Wild Health (TruDiagnostic 2x/yr); Fountain Life (epigenetic)
Fully at-home testing	SiPhox Health; Ultrahuman Blood Vision
Longest track record	InsideTracker (since 2009); Wild Health (since 2006)
Highest Trustpilot rating	Mito Health (4.8/5); Superpower (4.6/5); SiPhox (4.5/5)
Most iOS App Store ratings	Function Health (18,496 at 4.9/5)

Notes

1. **Garmin integration remains scarce but improving.** InsideTracker and Hundred Health have confirmed Garmin sync. Superpower added Garmin in v1.0.6 (Mar 2026) but post-update verification is absent. Hundred Health's Garmin likely operates via middleware (specific metrics synced TBD).
 2. **CSV/raw data export is poorly supported industry-wide.** Only InsideTracker and Ultrahuman confirm CSV export. Function Health requires a 3rd-party Chrome extension.
 3. **Prescribing capability is limited to a few services** (Lifeforce, Geviti, Fountain Life, Wild Health, Parsley Complete Care) -- fundamentally telehealth-hybrid models.
 4. **Biological age calculations are inconsistent across platforms.** One reviewer received 37.3 (Function) vs. 45.2 (Superpower) for the same person. Track trends within one platform, not across.
-

S7. Scored Rankings

7.1 Service-by-Service Scoring

All scores are justified with specific data from the service profiles in S3. Standardized counting: "Directly measured unique analytes, base tier, single draw." All \$/biomarker figures use the canonical methodology defined in S6.1 footnote ^1 (annual price / directly measured unique analytes, base tier, single draw).

Hundred Health (\$199/yr) -- Weighted Total: 7.60

Weighted sum: $4 \times .15 + 7 \times .20 + 10 \times .30 + 6 \times .10 + 8 \times .10 + 8 \times .10 + 8 \times .05 = 0.60 + 1.40 + 3.00 + 0.60 + 0.80 + 0.80 + 0.40 = 7.60$ (Total Coverage 7 under the uniform granular counting convention; Value 10 = cost-efficiency 10 blended with affordability 10; Data Access 8 for the unique automated 450+ EHR import; Convenience 8 for the field-best logistics profile).

Category	Score	Weight	Weighted	Justification
Priority Coverage	4	15%	0.60	21/45 directly measured → band 4 (20-24 band). 8 specialty 45-panel slots dropped from the prior \$499 panel: Free T3, serum Uric Acid, Lp(a), LDL-P/NMR, IGF-1, Cortisol, Prolactin, Homocysteine. 16 priority markers still missing (B12, Folate, DHEA-S, thyroid antibodies, etc.)
Total Coverage	7	20%	1.40	~71 directly measured under the uniform granular convention (52 non-urine analytes + ~19 urinalysis findings — 27 listed params, subtypes collapsed) — 70-84 band → 7. NMR/ autoimmune/metals/omega all absent (blocks higher bands)
Value	10	30%	3.00	Cost-efficiency 10 (\$2.80/biomarker on ~71 measured, 2 draws/yr — the field's lowest) blended 50/50 with affordability 10 (\$199/yr, the lowest price evaluated): $(10+10)/2 = 10$ — the field's top Value
Frequency	6	10%	0.60	2 draws/yr; Draw 2 reduced to ~55-marker fixed panel vs Draw 1 ~110 (company-acknowledged); 100-day retest, scoring 6
Unique Features	8	10%	0.80	Garmin (confirmed) + 450+ EHR import (unique) + 100-day protocol = 3 differentiators; NMR + ANA no longer offered, scoring 8
Data Access	8	10%	0.80	numerical + PDF (browser/in-app) + confirmed Garmin wearable-IN + unique automated 450+ EHR medical-record import (data consolidation) ; capped at 8 because there is no raw CSV/ API export
Convenience	8	5%	0.40	Quest + BioReference + LabCorp 5,000+ locations nationwide; at-home available; iOS 4.9/5; turnaround days to 1-2 weeks — field-best logistics profile = band 8

Function Health (\$365/yr) -- Weighted Total: 7.20

Category	Score	Weight	Weighted	Justification
Priority Coverage	7	15%	1.05	32/45 directly measured (71%); missing C-Peptide, Copper, Ceruloplasmin, ESR, Fibrinogen, LP-PLA2, Oxidized LDL, Cystatin C, IGF-1 (9 tests)
Total Coverage	8	20%	1.60	~92 directly measured per draw across 10+ categories (autoimmunity, heavy metals, NMR, urinalysis, pancreatic, omega); ~92 measured falls in the 85–99 range, scoring 8
Value	8	30%	2.40	Cost-efficiency 9 (\$3.97/biomarker, 2 draws/yr) blended 50/50 with affordability 7 (\$365/yr: $10 - 3 \cdot \log_2(365/200) \approx 7.4 \rightarrow 7$): $(9+7)/2 = 8$

Category	Score	Weight	Weighted	Justification
Frequency	6	10%	0.60	2 draws/yr but Mid-Year draw is reduced (~60 vs Annual ~100+) — band 6 (Draw 2 reduced), the same condition that scores Hundred Health 6
Unique Features	7	10%	0.70	NMR, autoimmune, heavy metals, urinalysis, bio age 2x/yr, AI chat. NO Garmin, NO clinician 1:1, NO Cystatin C
Data Access	6	10%	0.60	PDF yes; CSV via 3rd-party extension; no API; Apple Health only
Convenience	5	5%	0.25	Quest 2K+ locations; 48 states; iOS 4.9/5; but full results take 3-4 weeks — band 5 (slow turnaround), below the sub-2-week services; the excellent app keeps it from dropping to 4

Superpower Base+Advanced (\$388/yr) -- Weighted Total: 6.80

Category	Score	Weight	Weighted	Justification
Priority Coverage	7	15%	1.05	33-34/45 (73-76%); Advanced adds key markers
Total Coverage	7	20%	1.40	~87 measured; 8+ categories; NMR-like fractionation; no autoimmune/heavy metals in base
Value	7	30%	2.10	Cost-efficiency 7 (\$4.46/biomarker, 1 draw caps the tier at 7) blended 50/50 with affordability 7 (\$388/yr): $(7+7)/2 = 7$
Frequency	6	10%	0.60	1 draw/yr with affordable retesting — additional draw \$169-179 (under \$200) = band 6
Unique Features	6	10%	0.60	Garmin (Mar 2026), ADMA/SDMA, ESR, BioAge; but AI-only interpretation, supplement upselling
Data Access	7	10%	0.70	Data download/delete; Garmin + Oura + WHOOP sync
Convenience	7	5%	0.35	Quest/Labcorp; at-home +\$99-119; iOS 4.9/5

Mito Health Pro (\$549/yr) -- Weighted Total: 6.60

Category	Score	Weight	Weighted	Justification
Priority Coverage	8	15%	1.20	36/45 (80%); highest of any service; Cystatin C + IGF-1 unique
Total Coverage	8	20%	1.60	~87-95 measured under the uniform granular convention (incl. the 21-parameter urinalysis) — 85-99 band with NMR in Pro → 8; 9+ categories; no autoimmune in base
Value	6	30%	1.80	Cost-efficiency 6 (~\$6.03/biomarker on ~91 measured) blended 50/50 with affordability 6 (\$549/yr): $(6+6)/2 = 6$
Frequency	4	10%	0.40	1 draw/yr; additional pricing not published
Unique Features	8	10%	0.80	Cystatin C (rare), RBC Mg, B12+Folate in Core, 1:1 clinician, MitoMD AI, DEXA \$59
Data Access	5	10%	0.50	Lab reports accessible; no confirmed CSV; no wearable
Convenience	6	5%	0.30	LabCorp/Quest; all 50 states; web-only; ~1 week results

† Unpublished biomarker list — Priority Coverage, Total Coverage, and the Value cost-efficiency leg confidence-discounted $\times 0.5$ per §4.6; the Weighted total shown is the confidence-adjusted score used for ranking (raw category scores shown in S7.1 for transparency).

7.3 Tier Summary

Tier	Services	Score Range	Characterization
Tier 1 -- Recommended	Hundred Health, Function Health	7.20-7.60	The two clear front-runners. Hundred Health (7.60, the field's top weighted total) holds the field's top Value (cost-efficiency 10 blended with affordability 10) plus confirmed Garmin sync + 450+ EHR import; its one real limitation is the reduced \$199 panel (Priority Coverage 21/45). Function Health has the broadest clinical panel (~92 measured incl. NMR/ANA/metals + 2 draws/yr) and the strongest Priority Coverage of the two (32/45).
Tier 2 -- Strong Contenders	Superpower B+A, Mito Pro, Mito Core, Superpower Base	6.30-6.80	Each excels in one dimension but has trade-offs. Superpower B+A pairs strong 45-panel coverage with Garmin; Mito Pro leads outright on Priority Coverage (36/45). Superpower Base earns a high blended Value at \$199 but covers only 17/45 priority markers.
Tier 3 -- Niche / Supplementary	SiPhox, WHOOP, Empirical, InsideTracker	5.05-5.35	Strong in one or two dimensions (convenience, wearable focus, draw frequency, data export) but not as a primary all-around service.
Tier 4 -- Not Recommended	Lifeforce, Ultrahuman †, Parsley †, Wild Health, Geviti †	3.58-4.75	Wrong product category, poor value, or unverifiable claims. (<i>Ultrahuman, Parsley, and Geviti fall here after the \$4.6 ×0.5 confidence discount on their unpublished biomarker lists — Ultrahuman 4.65 / rank #12, Parsley 4.08 / rank #13, Geviti 3.58 / rank #15. Wild Health is #14 at 3.90 — \$74.90/biomarker at a \$4,345 price give it the field's worst Value.</i>)

† Priority Coverage, Total Coverage, and the Value cost-efficiency leg confidence-discounted ×0.5 per \$4.6 (unpublished biomarker list).

7.4 Scoring Methodology & Key Observations

Each service is scored 1–10 in seven categories (full rubrics in S4); the weighted total drives the ranking. How each category is scored:

Category	Weight	What it measures	What earns a high score
Priority Coverage	15%	How many of the 45-test reference panel are directly measured in the base membership	Directly measures most of the 45 target markers
Total Coverage	20%	Total directly-measured analytes + category breadth	~85+ markers across many categories (incl. NMR, autoimmune, heavy metals, omega)
Value	30%	A 50/50 blend of cost-efficiency (\$/directly-measured biomarker + draws/yr) and affordability ($10 - 3 \cdot \log_2(\text{annual price} \div \$200)$)	Low cost <i>per test</i> and a low total price
Frequency	10%	Included draws/year + trend-tracking + retest economics	2+ full draws/yr with affordable additional testing
Unique Features	10%	Meaningful, verified differentiators	Several real differentiators (Garmin, automated EHR import, 1:1 clinician, NMR, Cystatin C, prescribing)
Data Access	10%	Data out (PDF/CSV/API) + data in (automated EHR import) + wearable sync	Raw CSV/API export, or PDF + confirmed wearable + automated record import
Convenience	5%	Turnaround, at-home option, app quality, lab network, state coverage	Fast turnaround, at-home option, strong app, large nationwide network

For services that do not publish their biomarker list, Priority Coverage, Total Coverage, and the Value cost-efficiency leg are multiplied by ×0.5 (\$4.6), so unverifiable claims can't outrank disclosed panels.

Key observations:

1. **The ranking is driven primarily by Value (30%), then Total Coverage (20%) and Priority Coverage (15%).** Hundred Health wins the Value category outright (10, the field's highest: cost-efficiency 10 at \$2.80/biomarker plus affordability 10 at the lowest price) and tops the ranking at **7.60**. Function Health pairs the field's broadest directly-measured breadth (Total Coverage 8) and the stronger 45-panel coverage (Priority Coverage 7 vs HH's 4) with a solid blended Value of 8 (cost-efficiency 9 + affordability 7), landing at **7.20**. With Priority Coverage now weighted 15%, Function's panel-breadth advantage narrows the gap but does not close it — HH's Value lead (worth +0.60 of weighted score on its own) plus its edges in Data Access and Convenience keep it ahead.
2. **Mito Health Pro has the highest Priority Coverage (36/45, 80%), now worth more at the 15% weight — yet it still lands at 6.60 (#4).** Its strong Priority (8) and Total Coverage (8, ~87-95 measured incl. its 21-parameter urinalysis with NMR in Pro) lift it into the contender tier, but 1 draw/yr (Frequency 4), no confirmed export/app/wearable (Data Access 5), and a \$549 price that earns only a middling affordability 6 (Value 6) hold it below the front-runners.
3. **Hundred Health wins the Value category outright and posts the field's top weighted total (7.60).** At \$199/yr, HH pairs the lowest cost per biomarker in the field (\$2.80 on ~71 granular-counted markers, cost-efficiency 10) with the lowest price evaluated (affordability 10) for a blended **Value of 10 — the highest of any service**, weighted 30%. Its reduced \$199 panel holds Priority Coverage at 4 (21/45) and Total Coverage at 7 (~71 measured) — even at the heavier 15% Priority weight, those are outweighed by its category-leading Value plus a confirmed reduced Draw 2 (Frequency 6), confirmed Garmin sync + 450+ EHR import (Data Access 8), and field-best logistics (Convenience 8). Its weighted total (**7.60**) leads Function Health (7.20) and Superpower B+A (6.80). It is the top-scoring service overall, and the top one that publishes its panel. Confidence MEDIUM. 16 priority markers remain missing (B12, Folate, DHEA-S, thyroid antibodies, Cystatin C, etc.), plus the 8 specialty 45-panel slots dropped from the prior panel (Free T3, serum Uric Acid, Lp(a), LDL-P/NMR, IGF-1, Cortisol, Prolactin, Homocysteine).
- 3a. **A \$4.6 confidence discount was applied to the three services that do not publish their biomarker lists — Ultrahuman Blood Vision, Geviti Plus, and Parsley Longevity Labs.** Their Priority Coverage, Total Coverage, and Value cost-efficiency leg rest on unverifiable vendor claims, so those inputs are multiplied by 0.5 (the affordability leg, based on the verified price, is not discounted). The effect is most consequential for Ultrahuman: without the discount it would score ~6.25 — above several services that publish their panels, purely on an unpublished panel — but after the discount it scores **4.65 (rank #12)**. Parsley settles at 4.08 (rank #13) and Geviti at 3.58 (rank #15). The discount pulls all three out of the contender tier so that none rises above a published-panel peer on the strength of claims that cannot be verified; their residual standing reflects only their verifiable, observable features (data export, convenience, draw frequency).
4. **Superpower at \$388 (Base+Advanced) offers comparable coverage to Function Health** but requires the \$189 Advanced add-on and carries trust concerns (lawsuit, marketing practices).
5. **Services scoring <6.0 are too expensive, too narrow, or have unverifiable claims.** They may serve niche use cases but are not optimal as a primary monitoring service.
6. **No service covers all 45 target tests.** Common gaps across ALL base tiers: Fibrinogen, LP-PLA2, Oxidized LDL, C-Peptide, Copper, Ceruloplasmin. Selenium available only as FH add-on. Gap-fill required regardless of choice.
7. **External ranking discrepancies:** Third-party blog reviews (Outliyr, Elo Health, Gene Food, healnourishgrow) may rank services differently due to different weighting criteria, affiliate relationships, or less rigorous counting methodologies. This report's rankings are based on the standardized 7-category weighted rubric defined in S4 and should not be expected to match external "best of" lists.
8. **Value blends cost-efficiency with absolute affordability (50/50).** Each service's Value is the average of two 1-10 legs: cost-efficiency (price per directly-measured biomarker + draws/year) and affordability (total annual price). This rewards services that are both efficient per-test and cheap in absolute terms — Hundred Health and Superpower Base (both \$199) earn the top blended Values (10 and 8.5), while efficient-but-pricey services are tempered (Mito Pro \$549 → Value 6.0) and expensive low-count services sink (InsideTracker \$829 → 3.5; Wild Health \$4,345 → 1.0). The personalized "cost to reach the 45-panel" sub-criterion remains removed, since panel breadth is already captured in Priority and Total Coverage.

S8. Recommendations (Output 5)

(a) Best Overall: Hundred Health (\$199/yr)

Factor	Evidence
Weighted score	7.60/10 (#1 of 15)
Value	10/10 — the field's top: lowest cost per biomarker (\$2.80) at the lowest price (\$199)
45-panel coverage	21/45 direct (47%) — the reduced \$199 panel
Total biomarkers	~71 directly measured (uniform granular count)
Cost per biomarker	\$2.80/marker — the field's lowest
Draws/year	2 included (Draw 1 ~110 markers, Draw 2 ~55 reduced)
Wearable + data	Confirmed Garmin sync + unique automated 450+ EHR import (Data Access 8)
Convenience	8/10 — Quest + BioReference + LabCorp 5,000+ locations, at-home available, iOS 4.9/5, days-to-2-week turnaround
Unique features	Garmin + 450+ EHR import + 100-day clinician protocol
Track record	Founded Dec 2025 (~6 months); founder/CEO Tyler Smith bootstrapped SkySlope to an \$80M+ Fidelity National Financial acquisition (2017) and is an early investor in Function Health

Known weaknesses:

Weakness	Severity	Mitigation
Reduced \$199 panel — 24 of 45 priority markers not offered (NMR, ANA, Lp(a), IGF-1, Cortisol, Free T3, etc.)	MEDIUM	Pair with Function Health, or DTC gap-fill for the specialty markers
No CSV/API export (PDF + EHR import only)	MEDIUM	PDF report sharing + 450+ EHR import cover most consolidation needs
~6 months old (launched Dec 2025) — maturity risk	MEDIUM	Founder's verified execution track record (SkySlope → Fidelity) partly mitigates
Reduced Draw 2 (~55 markers vs ~110)	LOW	Draw 1 is the comprehensive snapshot; Draw 2 tracks the core
No specialty panels (NMR, autoimmune, heavy metals)	MEDIUM	Gap-fill via DTC, or pair with Function Health

Why not Function Health (\$365)? — it's the pick for comprehensive breadth. Function Health is the **best choice where comprehensive clinical breadth is the goal** (7.20, #2). Its ~92 directly-measured markers, 32/45 priority coverage, and full specialty panels (NMR, ANA, heavy metals) are meaningfully broader than Hundred Health's reduced \$199 panel, and it includes 2 fuller draws/yr. Hundred Health wins the overall ranking on Value, data integration, and convenience; but if panel completeness is the priority, Function Health is the better single service (and the better base for the full-45-panel combination in (f)).

Function Health (\$365) — best for breadth, known weaknesses:

Weakness	Severity	Mitigation
No native Garmin sync	MEDIUM	Garmin -> Apple Health -> Function (iOS only); or pair with InsideTracker

Weakness	Severity	Mitigation
No CSV export natively	MEDIUM	3rd-party Chrome extension; or manually transcribe from PDF
No 1:1 clinician consultation	LOW	Bring results to own PCP or functional medicine MD
Clinician notes generic/AI-generated	LOW	Use AI Chat feature + own physician for interpretation
Missing 9 tests from 45-panel	MEDIUM	Gap-fill via Marek Health DTC at ~\$326-345/yr [Estimated]
Co-founder controversy	LOW	Mark Hyman's pseudoscience history is a reputational concern; does not affect lab accuracy (Quest CLIA labs). Theranos comparisons are superficial -- FH uses standard venous lab infrastructure, not proprietary technology.

Why not Mito Health Pro (\$549)? Mito Pro has the highest 45-panel coverage (36/45, 80%) and uniquely includes Cystatin C and IGF-1. However, it provides only 1 draw/yr, has no mobile app, no wearable integration, no NMR at Core tier, no confirmed CSV export, and costs ~2.75× Hundred Health. Its weighted score (6.60, #4) trails on Value, Frequency, and Data Access, even though its Total Coverage is 8 under the uniform granular convention (~87-95 measured incl. urinalysis, NMR in Pro). For a user prioritizing panel completeness above all else, Mito Pro is a strong single-service choice.

(b) Best Value: Hundred Health (\$199/yr) — Function Health (\$365/yr) is the best value where comprehensive breadth is the goal

Metric	FH (\$365)	HH (\$199)	SP Base+Adv (\$388)	Mito Core (\$349)	EH (\$399)
Cost per biomarker	\$3.97	\$2.80	\$4.46	~\$4.50	\$8.31
Draws/year	2	2	1	1	3
Cost per draw	\$183	~\$99.50	\$388	\$349	\$133
Biomarkers per draw	~92	~71	~87	~75-80	~45-50
45-panel coverage (base)	32/45 (71%)	21/45 (47%)	33-34/45 (73-76%)	30/45 (67%)	~25-30/45 (56-67%)
Value score	8/10	10/10	7/10	7.5/10	6/10

Hundred Health tops the Value category outright (10/10): it pairs the field's lowest cost per biomarker (\$2.80, ~71 granular-counted markers) with its lowest price (\$199), and the 50/50 blend of cost-efficiency and affordability rewards both. If only a core panel is needed, it is the best value available. The trade-off is breadth — its \$199 panel covers just 21/45 priority markers (vs Function Health's 32/45) and drops specialty markers (NMR, Lp(a), IGF-1, Cortisol, Free T3, and others).

Function Health is the best value **where comprehensive clinical coverage is the goal** (Value 8): its modestly higher price buys a meaningfully broader clinical panel — NMR, ANA autoimmune, heavy metals, and 11 more of the 45 priority markers — even though the raw parameter counts are closer (~92 vs ~71) once urinalysis is itemized for both. Superpower Base+Advanced (\$388, Value 7) and Mito Core (\$349, Value 7.5) are competitive on price per biomarker but each includes only 1 draw/yr, capping the cost-efficiency leg at 7.

(c) Best Data Integration (Garmin + CSV + trends): InsideTracker (\$829/yr)

Feature	InsideTracker	FH	SP	HH	Mito
Garmin native sync	YES (confirmed)	NO	YES (unverified)	YES (confirmed)	NO
CSV export	YES	NO (3rd-party)	Unknown	NO	Not confirmed
Past results upload	30 sets/yr + DNA	Limited	PDF upload	450+ EHR auto	Past lab upload
Data Access score	8/10	6/10	7/10	8/10	5/10

Key finding: Garmin integration is now confirmed for both InsideTracker and Hundred Health. InsideTracker offers the most complete data package (Garmin + CSV + 30 uploads/yr). Hundred Health offers Garmin + unique automated 450+ EHR import (credited at Data Access 8) but raw CSV export is unverified/absent.

For Garmin users: At its new **\$199/yr**, Hundred Health (confirmed Garmin sync + 450+ EHR import) is now the **cheapest Garmin-capable single service** evaluated — a meaningful drop from its prior \$499. It sits at **rank #1 (7.60)**; combined with no CSV/API export (confirmed absent), InsideTracker (\$829/yr, Garmin + CSV) is still preferred where raw-data export matters, and Function Health (\$365/yr, broadest panel) where breadth matters. InsideTracker (\$829/yr) remains best if CSV export is also essential.

(d) Best for Frequent Monitoring: Empirical Health (\$399/yr) — *Function Health (\$365/yr) for the deepest snapshot per draw*

Metric	FH (\$365)	EH (\$399)	Wild Health (\$4,345)	WHOOP (\$588)
Draws/year	2	3	4	2 (up to 6 at \$899)
Cost per draw	\$183	\$133	\$1,086	\$294
Breadth per draw	~92 markers	~45-50 markers	~58 markers	~50-55 markers
Frequency score	6/10	8/10	9/10	7/10

For comprehensive monitoring: Function Health's 2 draws/yr with ~92 markers each provides the deepest snapshot at each draw.

For highest frequency at low cost: Empirical Health (\$399 for 3 draws/yr, \$133/draw) provides the most draws per dollar but lacks hormones and advanced longevity markers. Best as a supplementary cardiovascular-focused monitoring service.

(e) Services to Avoid

Service	Annual Cost	Weighted Score	Reasons to Avoid
Geviti †	\$1,529	3.58 (#15)	\$21.84/biomarker; unpublished biomarker list (Priority/Total/Value-efficiency confidence-discounted ×0.5 per §4.6); Rx upsell pressure
Wild Health	\$4,345	3.90 (#14)	\$74.90/biomarker (worst value); only 14-15/45 base (worst 45-panel coverage); billing fraud allegations; 4+ month DNA delays
Parsley Health †	\$350	4.08 (#13)	No published biomarker list (Priority/Total/Value-efficiency confidence-discounted ×0.5 per §4.6); male panel uncertain; BBB D-; no mobile app; no data export

Service	Annual Cost	Weighted Score	Reasons to Avoid
Lifeforce	\$599-\$1,838	4.75 (#11)	~48 directly measured (uniform count); limited 45-panel coverage (~18-22/45, no specialty markers); \$12.48/biomarker; supplement upsell with liver damage allegation; only 10 states
SiPhox Health	\$450	5.35 (#7)	300%+ testosterone discrepancy; 600%+ vitamin D variance; no CBC; 5-15% sample failure; "not a substitute for annual bloodwork" (SiPhox's own admission) — accuracy concerns outweigh its value/convenience score

Services with caveats (proceed carefully):

Service	Caveat
Hundred Health (\$199)	Top pick, but new. Price dropped ~60% to \$199; with Value (30%) the dominant weight and Total Coverage (20%) + Priority Coverage (15%) next, its field-top blended Value (10) — lowest cost per biomarker (\$2.80 on ~71 granular-counted markers) at the lowest price (\$199) — plus confirmed Garmin, 450+ EHR import (Data Access 8), and field-best logistics (Convenience 8) lift it to 7.60, the field's top weighted total . But the blood panel was cut alongside the repricing, holding Total Coverage at 7 (the specialty panels — NMR, ANA, heavy metals — remain absent), and Priority Coverage at 4 (21/45). ~6 months old (launched Dec 2025). The maturity risk and reduced panel are the main concerns; worth re-checking whether HH restores any dropped specialty markers. Maturity-risk counterpoint: founder/CEO Tyler Smith has a verified execution track record — he founded and bootstrapped SkySlope (real-estate transaction software) to its 2017 majority acquisition by Fidelity National Financial (NYSE: FNF) at an \$80M+ valuation, and is an early investor in Function Health and TruMe.
Superpower Base+Advanced (\$388)	Active lawsuit; aggressive supplement upselling; FTC cancellation concerns. Good value if trust issues acceptable. Score 6.80 (#3).
Superpower Base Only (\$199)	Ranks #6 (6.30) on a strong blended Value — the \$199 price (affordability 10) plus a low cost-per-biomarker (\$3.62) — but covers only 17/45 priority markers (~55 measured, marketed as "100+"). Excellent value, insufficient as a <i>sole</i> comprehensive panel; same lawsuit / supplement-upsell concerns as Superpower B+A.
InsideTracker (\$829)	Best data integration in the field (confirmed Garmin + native CSV export + 30 record uploads/yr — the Best Data Integration award winner), but \$17.27/biomarker is expensive for its ~22/45 panel, and it lacks Lp(a), Homocysteine, and DHEA-S for males plus any clinician consultation. Strong as a <i>companion</i> data hub; not recommended as a sole primary panel. Score 5.05 (#10).
Ultrahuman Blood Vision (\$499)	Individual biomarker list not published; cannot verify coverage claims. Without the \$4.6 discount it would score ~6.25 , but because that standing rested on an unpublished panel, the confidence discount (Priority/Total/Value-efficiency x0.5) drops it to 4.65 / rank #12 . LOW confidence.

(f) Recommended Combination

*Hundred Health (\$199) is the best single service overall and Function Health (\$365) the best for breadth (see (a)). This section targets **full 45-panel coverage**, which no single membership delivers — and Function Health, with the most 45-panel coverage to build on (32/45), is the better base to complete the panel. A Hundred Health–based build is noted as the budget/Garmin alternative below.*

Primary recommendation: Function Health + Marek Health DTC gap-fill

Component	Annual Cost	What It Provides	Coverage
Function Health (base)	\$365	~92 directly measured, 2 draws/yr, NMR, ApoB, Lp(a), autoimmune, heavy metals, urinalysis, bio age 2x/yr	32/45 direct + 2 indirect = 34/45
Marek Health gap-fill (annual)	~\$326-\$345 est. [Estimated -- not independently verified]	C-Peptide (\$26), Fibrinogen (\$50), LP-PLA2 (\$60), Oxidized LDL (\$56-75), Copper (\$34), Ceruloplasmin (\$20), ESR (~\$15), Cystatin C (~\$40), Selenium (~\$25)	+9 tests

Component	Annual Cost	What It Provides	Coverage
FH add-ons (annual)	Unknown pricing	Folate (Extended Vitamins/Minerals add-on); Selenium already covered by Marek gap-fill	+1 test
TOTAL	~\$691-\$710/yr (excl. FH add-on pricing)	~100+ directly measured + 42/45 panel tests direct (+ 2 indirect = 44 effective)	42/45 direct (93%) or 44/45 effective (98%) counting B12 proxy + serum Omega-3

Gap-fill detail (tests missing from Function Health): ^2

^2 All individual DTC prices are estimates based on Marek Health catalog research and have not been independently verified at time of writing. Prices may vary.

Test	Category	Why It Matters	Est. DTC Cost
C-Peptide	Metabolic	Differentiates insulin resistance from beta cell dysfunction	\$26
Fibrinogen	Inflammation	Independent CV/clotting risk; not redundant with hs-CRP	\$50
LP-PLA2	Cardiovascular	Vascular-specific inflammation, not redundant with hs-CRP	\$60
Oxidized LDL	Cardiovascular	Atherogenic particle damage; optional if ApoB + NMR + LP-PLA2 covered	\$56-75
Copper	Vitamins/Minerals	Completes Cu:Zn serum ratio (optimal Cu:Zn 0.7-1.0 by serum concentration; FH already tests Zinc)	\$34
Ceruloplasmin	Vitamins/Minerals	Enables free copper calculation; Wilson's disease screen	\$20
ESR	Inflammation	Broad inflammatory screen; complementary to hs-CRP	~\$15
Cystatin C	Kidney	Superior GFR estimation; critical for muscular individuals	~\$40
Selenium	Vitamins/Minerals	Thyroid cofactor; antioxidant; available as FH add-on (unknown pricing) or via Marek DTC	~\$25

Note: Fibrinogen, LP-PLA2, Oxidized LDL, and Ceruloplasmin are missing from all 15 qualifying membership services evaluated (Fountain Life offers LP-PLA2 but is disqualified per DQ-6: no standalone blood option). Selenium is missing from all base tiers but available as a Function Health add-on (Extended Vitamins/Minerals). DTC ordering required for remaining gaps regardless of which membership service is chosen.

Enhanced combination (for Garmin integration):

Component	Annual Cost	Added Benefit
Function Health	\$365	Primary biomarker service
Marek Health gap-fill	~\$326-345 [Estimated]	9 missing tests
InsideTracker (membership + 1 Ultimate)	~\$489	Native Garmin sync, CSV export, upload FH results (30/yr), cross-platform trending
TOTAL	~\$1,104-\$1,219/yr	Garmin + CSV + full 45-panel + 3 draws/yr + cross-platform trending

Recommended only if Garmin integration and CSV export are hard requirements. The base combo (FH + Marek at ~\$691-710) is sufficient for comprehensive monitoring with manual data tracking.

Alternative budget combination (not recommended as primary but noted for completeness):

Component	Annual Cost	What It Provides
Function Health	\$365	~92 measured, 2 draws/yr, NMR, ApoB, Lp(a), autoimmune, heavy metals
Superpower Baseline	\$199	Garmin sync (Mar 2026), adds ESR via Advanced if upgraded; supplements Baseline markers
TOTAL	~\$564/yr	2-3 draws/yr across services; Garmin via Superpower; broader combined coverage

This is less expensive than FH + Marek (~\$691-710) but does NOT fill the 45-panel gaps (C-Peptide, Fibrinogen, LP-PLA2, etc. still missing from both) and carries Superpower trust concerns (lawsuit, marketing practices). Not recommended over the primary FH + Marek combination.

S9. Open Questions

50 open questions remain across the services, plus industry-wide structural risks. Organized by category with impact ratings.

9.0 Industry Context: Structural Risks Affecting All Services

Investigative reporting by Sherwood News (Dec 2025) identified structural business model risks that affect all membership health testing services:

Risk	Detail	Source
Blood testing unprofitability	Superpower co-founder stated "blood testing is a s--- business." Blood testing itself is a loss-leader; real revenue comes from downstream supplement sales, compounded medications, and treatment upsells.	Sherwood News, Dec 2025
Supplement/drug upsell model	Function Health plans a supplements marketplace. Hims & Hers recommends GLP-1 drugs it manufactures. AI analysis serves as customer acquisition, not a profit center. This incentive structure may bias recommendations toward purchasable products.	Sherwood News, Dec 2025
HIPAA/privacy uncertainty	HIPAA protections are unclear for consumer health platforms that are not traditional covered entities. Data handling, sharing with third parties, and retention policies vary by service and are often opaque.	Sherwood News, Dec 2025
Market consolidation predicted	Industry analysts predict acquisitions and consolidation within 12-18 months. Some services may not survive independently, raising questions about data portability and subscription continuity.	Sherwood News, Dec 2025

Impact on recommendations: These risks apply to all services evaluated, not just the recommended option. The recommendation to use Function Health + Marek Health gap-fill remains valid because: (1) FH uses Quest labs (established infrastructure), (2) the gap-fill tests are a-la-carte (no subscription lock-in), and (3) data portability risk is mitigated by downloading PDFs/CSVs after each draw. However, users should be aware that the long-term business model of any subscription testing service depends on revenue streams beyond testing fees.

9.1 Biomarker Verification Gaps (12 questions)

#	Question	Impact	Service
1	What is Wild Health's actual biomarker-by-biomarker list? Only ~30-35 of "65-68+" confirmed.	High	Wild Health
2	What is Fountain Life's actual biomarker list? Only ~75-90 of "100+" verifiable.	High	Fountain Life
3	What specific biomarkers does Ultrahuman Blood Vision include? Claims "100+" but names not published.	High	Ultrahuman

#	Question	Impact	Service
4	What specific biomarkers does Parsley Health include? Only 13 panel category names disclosed.	High	Parsley
5	Does Parsley include male-specific markers (Free T, PSA, DHEA-S)? Originally described as "for women."	High	Parsley
6	Is Mito Health Prolactin included for male members? Website lists it as "Women only."	High	Mito Health
7	What is the directly measured count for Geviti? Estimated ~70-80 of claimed 100-115+.	Medium	Geviti
8	Does Empirical Health's "100+" claim hold up? Only ~45-50 directly measured estimated.	Medium	Empirical
9	Is Function Health Free Testosterone equilibrium dialysis or immunoassay? S5 shows YES (directly measured) but method unknown.	Low	Function Health
11	Is Superpower's "lipoprotein fractionation" true NMR or ion mobility?	Medium	Superpower
12	Is Mito Omega-3/6 serum-based or RBC membrane-based?	Medium	Mito Health
13	What cholesterol particle methodology does Mito use (NMR vs ion mobility)?	Medium	Mito Health

9.2 Pricing Questions (12 questions)

#	Question	Impact	Service
15	What are Wild Health add-on panel prices? Not published.	High	Wild Health
16	What is Function Health's Extended Vitamins/Minerals add-on pricing?	Medium	Function Health
17	What is Function Health's re-test/on-demand draw pricing?	Medium	Function Health
18	What is Hundred Health's extra (3rd) draw cost? Still UNVERIFIED — no published price; an App Store reviewer reported a ~\$300 upsell to test the ~55 markers outside their draw, but that is an anecdote, not a published 3rd-draw price.	Medium	Hundred Health
19	What is Hundred Health's exact at-home phlebotomy fee? Still UNVERIFIED — confirmed available "at additional cost," amount unpublished; industry mobile-phlebotomy range \$75-\$150/visit.	Low	Hundred Health
20	What is Mito Health's retest/additional draw pricing?	Medium	Mito Health
21	Does Lifeforce's \$599/yr include at-home draws or lab walk-ins only?	Medium	Lifeforce
22	What is Fountain Life's a-la-carte blood panel price (if available separately from \$10,500 CORE)?	Low	Fountain Life
23	What is Parsley Health's exact biomarker-by-biomarker list for Longevity Labs?	High	Parsley
24	What is Superpower's Advanced panel pricing -- \$189 or \$149? Conflicting sources.	Medium	Superpower
25	Does Superpower offer multi-draw discounts or annual plans beyond single-draw pricing?	Low	Superpower
26	What is Parsley Complete Care (\$350/yr lab + ~\$150/yr visit) total annual cost with labs?	Low	Parsley

9.3 Feature & Integration Questions (9 questions)

#	Question	Impact	Service
27	Garmin sync confirmed for Hundred Health — but what specific data is synced? Still UNVERIFIED — Garmin integration CONFIRMED (still on homepage), but metric depth undocumented and middleware-mediated; proprietary Garmin metrics (Body Battery / Training Load) almost certainly NOT synced (steps/sleep/HR likely).	Medium	Hundred Health
28	Does Superpower's Garmin sync (v1.0.6, March 2026) actually work well? No post-update reviews found.	High	Superpower
29	Does SiPhox support Garmin? Marketing claims 300+ devices but official list omits Garmin.	Medium	SiPhox

#	Question	Impact	Service
31	Can Function Health export data as CSV natively?	Medium	Function Health
32	Can Lifeforce export raw biomarker data (CSV/PDF)? Not documented.	Medium	Lifeforce
33	What is Fountain Life's data export capability? Blood results accessible outside clinic?	Low	Fountain Life
34	Can Wild Health patients access raw lab data? Users report difficulty.	Medium	Wild Health
35	What specific medical record systems does Hundred Health's EHR import cover (Epic? Cerner?)? Updated: count now 450+ health systems (was 300+), but specific vendors still unnamed in all public sources.	Medium	Hundred Health
36	Does Superpower have a functional Android app? Only iOS noted in research.	Low	Superpower

9.4 Accuracy & Methodology Concerns (5 questions)

#	Question	Impact	Service
37	How accurate are SiPhox capillary results vs venous? Independent reviewers found 300%+ discrepancies.	High	SiPhox
38	SiPhox fasting guidance absent despite testing metabolic markers.	Medium	SiPhox
39	What is the 5-15% sample failure rate for SiPhox? Free replacement kits?	Medium	SiPhox
40	Is Superpower's Estradiol immunoassay or sensitive LC/MS-MS?	Low	Superpower
40a	OGTT (oral glucose tolerance test) is recommended by Peter Attia as a key metabolic test but is NOT available from any consumer membership blood testing service. Requires clinical ordering. Consider adding to gap-fill protocol.	High	All services

9.5 Trust & Operational Questions (7 questions)

#	Question	Impact	Service
41	Status of Function Health lawsuit against Superpower?	Medium	Both
42	Which lab network does Mito Health use? Conflicting sources.	Medium	Mito Health
43	Does Wild Health accept insurance for blood work portion? Claims vary.	Medium	Wild Health
44	What happened to Forward Health patient data after Nov 2024 shutdown?	Low	Forward
45	What is Function Health's current verified member count? "100K+" cited but date unknown.	Low	Function Health
47	Who is SiPhox Health's Chief Medical Officer? No named CMO found in research.	Medium	SiPhox
48	What do Lifeforce's "[VERIFIED]" tags in marketing materials actually verify?	Low	Lifeforce

9.6 Service-Specific Conditional Items (5 questions)

#	Question	Impact	Service
49	What biomarkers are in Lifeforce's follow-up panel (2nd draw)? Same as initial or reduced?	Medium	Lifeforce
50	Is Lifeforce Brain Protection panel (\$200) available standalone or only with membership?	Low	Lifeforce
51	When will Hundred Health's announced Galleri add-on be available and at what price? Still UNVERIFIED: all 2026 reviews list it as " Coming Q1 2026 ," not confirmed live on the products page as of 2026-06-08 (now past Q1, no go-live confirmation); no published price.	Low	Hundred Health
52	Is OneTwenty available to the public? Currently closed beta with ~25 members.	Low	OneTwenty

#	Question	Impact	Service
53	What does Fountain Life's "unlimited" draws mean in practice? Any per-visit fees?	Low	Fountain Life

Summary Statistics

Last updated: 2026-06-10. Category weights: Priority Coverage 15% · Total Coverage 20% · Value 30% · Frequency 10% · Unique Features 10% · Data Access 10% · Convenience 5%. Value is a 50/50 blend of cost-efficiency (price per directly-measured biomarker + draws/year) and absolute affordability ($10 - 3 \cdot \log_2(\text{annual price} \div \$200)$, clamped 1-10). Biomarker counting uses a uniform granular convention: every service's published urinalysis parameters are itemized (subtypes collapsed to one finding each), as CBC/CMP components already were, applied identically to all 15 services. All 1-10 category scores reflect a completed cross-category consistency audit, and the tables are sorted highest-ranked to lowest.
